

Columbus Oct. 1st. 84

Prof. S. Watson Cambridge

My dear Prof.

You have probably seen in Bot. Gaz. last number the criticism of Mr. J. S. Rose I had so much to do that I could not look over the matter until to day.

According to Mr. Mohr's statements in letters, the *H. hornei* *stegium* and *Trihorizon* *macer-*
stegium are species which have been found in Mexico by himself and which have been casually mixed with his specimens of mobile in the transfer of his herbarium. But *H. stetinum* will & *H. occidentale* *sulliv.* have been forgotten and I can not in any way account for the blunder. For the last species only I find that the last plate §1 of the 2^d. vol. of the Icones is adhering to 80 this duly marked as recorded, the other not. But that is a poor excuse. About *Dicranella Canadensis*, I think that the species was published by Mitten after I had named the *Dicrania*. But that is also inexcusable as I could or should have described the species at the end of the volume in the addenda -

Now, please tell me what you think I
should do: either send to the Gazette & not
acknowledging the omission and giving a short
description of those three species or let the
matter drop.

Please excuse me. I am sorry to give you
the trouble to come again to this subject, the
Manual, which has troubled you already too
much.

I have a letter from a Botanist of Hungary
Dr Demeter who sends me a new species of *Tranymo-*
ranioides,^{moss} and another from Prof. E. Beschelle of
Paris who says that the Librarian M. Berger
who received copies of the Manual for sale from
Mr. Passino has already none left. I wrote
to Mr. Passino about that.

Very truly yours
J. Lequereux
