York 29/7 mo. 1872.  
 Dear Dr. Gray Recd. Aug. 29.

I am in receipt of thy favour  
 of June 19<sup>th</sup>, enclosing dried flowers of  
 the yellow *Aquilegia*, which I consider  
 most beautiful, & a plant highly desirable  
 to obtain roots & seeds of in quantity, if  
 possible. It is remarkable as a "var."  
 of *A. canadensis*. Probably all the plants  
 mentioned in Dr. Parry's letters, sent to  
 me, would be valuable. I see he  
 mentions a "*Mercurialis sibirica*". This  
 genus, & the allied *Lithospermum*, are  
 favourites of mine, so that anything  
 new & showy belonging to them would  
 be very welcome. *Polygonatum confertum*,  
*Claytonia megarhiza* also would both  
 be valuable no doubt. Where possible,  
 roots should be sent, & seeds also. The  
 chance by seed is generally much more  
 certain than by roots, but if roots do suc-  
 ceed, there is a gain in time which is of  
 great importance: for even if we get a  
 crop of seedlings, yet if we cannot sell

till we have seen them flower, the loss of time & remuneration is great. On the other hand a few roots blooming "proves" the plant, & renders the stock of unflowered seedlings saleable immediately.

Generally speaking, we have found that roots travel best when packed in Boxes in fresh (rather dry) moss. The moss should not be extremely dry, & yet on no account wet: but just as you would gather it in woods when ~~not moistened with rain.~~ <sup>the weather is warm & sunny</sup>. We find an advantage in alternating layers of paper, & laying the roots closely side by side upon it; covering them with another layer of paper, & then a layer of an inch or two of moss, & so on. All packages should be sent by the quickest line of conveyance, & by steamer. I think that Austin, Baldwin & Co have often forwarded packages for us promptly. Casks are not so good as square <sup>or</sup> boxes: for when casks are rolled, the contents are liable to form

a hard compact mass in the middle!

A few Birch twigs (without leaves) interspersed among the moss &c tend advantageously to keep the bulk "open" - i.e., non-compressed.

Having been absent from home during most of last month, I have not had opportunity to examine further into the Flora of North America, but I will again enumerate the names of some plants of which I have read the descriptions & think well worth obtaining if possible. (See last page).

All perennial Gentians should be sent. We think we can cultivate almost everything if we know its native soil, situation &c! Please present my kind regards to Dr. Parry from whom I shall no doubt hear in due season. Trusting you will both be successful & enjoy your rambles in the wild regions you propose to visit

I remain thy friend very resp<sup>r</sup>  
(see over) S. P. Backhouse
