

Apalach^a Nov. 15. 1839

Dr. Gray.

My dear Sir.

Yours of the 4th came yesterday, and
also Proofs from Bigelow up to p 442.

The Alabama grass is evidently of the
Oryzeae group, and very near Liriola,
but apparently distinct. You see
I have given it a name which,
if you don't like, please try your
own hand. I wish you would also
insert it in the Synopsis, and to do
this you will have to alter the three
other genera somewhat. Put it in
between Tizania & Hydrochloa.

Engelmair's grass I believe to come in
here also, much better than in Chlorideae,
but it's such a reduced thing we can
only guess at it. Nine of my Chlorideae
come within a mile of it, but I suppose
we must put it there. Suppose you place
it before Spartina. I hate to trouble
you for this, but my MS being in
Cambridge I cannot do it myself. The
character of the Tribe will have to be altered
to receive it. If you prefer to put it
in Oryzeae you may do so on my respon-

ibility and Eggleston may scold
me as much as he likes. I have
no time to confer with him about
it.

I have been sick almost all the
time since my return, and at the
present sitting am not worth one
^{your} Cambridge cents. I fear the printers
will find me backward unless I
feel better soon. But I have secured
a basketful of Palmetto seeds for
you which I will send by the first
vessel for Boston unless you designate
some other course.

I want a French Microscope
like yours. Can you tell me how to
get it? I inclose graph &c
and remain

Yours sincerely
A.M. Chapman
