

Ellwood 13. Feb. 1878

Geo. E. Bissellport

Dear Sir

Mrs. of Jan 1. is at  
hand. You are not mistaken in  
supposing some one seated on the  
rock on the stereoscopic view of  
the "Rock". Mrs. Bartlett is in the  
picture.

We have had Captain Grinnells  
and California so reassuring in  
the prospect of a fruitful  
year. Up to this date we have  
had at Ellwood 15.5; more than  
in much having fallen last night.  
A rich wood now covers every hill  
and corner and plain. The  
country is lovely to behold.  
In a few weeks I will be  
out in botanical studio in  
the warm hillsides for flowers  
in the woods and shrubs and  
canyons and cliffs of rocks for  
the delicate ferns. How abun-  
dant they will be where

the destruction visit me. This morning I had to run with all my might to save one of my favorite spots from their wholesale miltle. The herder told me that Mr. Cooper had given orders to have the roads all cleared out by the sheep. But I convinced him - China-man as he was that more than weeds passed there so that choice spot was saved.

I am preparing my list of items and will have it ready to hand to you in a few days.

My subscription for "Money & Bull-letter" goes by this mail as also an order for your Note on *Batrachium simplex* Hitch."

I will do what I can to obtain living plants of *Schizanthus* Cooperae for you as well as for others

Will note its habitat and write as particularly as I can. Why did not the description of *Schizanthus californicus* accompany the illustration in Prof. Eaton's second Number of North American Herbs?

Very Truly Yours  
Sarah P. Cooper

I have just read over again  
your letter of Aug. 27. some  
points of which I must no-  
tice. How have you succeeded  
with *Cheilanthes cooperi*?

In a month or two I must  
try and collect some live  
plants for you and others  
of my friends who desire  
to have the fern growing.

I have never seen this fern  
growing spontaneously. Will  
try to see it in its natural state  
when the rains bring up veg-  
etation.

If nothing prevent I will  
try to send you plenty of  
our Santa Barbara species.

Many thanks for your offer  
to aid me in collecting.

It is still very dry here. The hills sides are still brown and bare. The stock on the hillsides are beginning to dry up. People are beginning to feel anxious about game. If we have another dry year there will be much suffering in California. I hope however that we will have a sufficient rain-fall before winter comes. That both stock and game will suffice.

Aug 27<sup>th</sup> S. P. C.

It is raining and promises an inch and more. We are all thankful for poor Starving cattle around us. I hope we'll have some grass to nibble.

the flowering plants of New England. When through with <sup>forty</sup> my collection of ferns. Many want to make them one of the flowering plants.

I have not noticed two varieties of Aspidium argenteum with regard to fragrans as you observed. Will remember to do so when opportunity offers.

There are no Botrychiums in this vicinity - at least none found as yet -

I send you by this opportunity two Stereoscopic views one of the pool the other of a part of our canon. Neither of them very good, such as they are please accept.

Cooper, Sarah Paxson. 1878. "Cooper, Sarah P. Feb. 13, 1878 [to G. E. Davenport]." *Asa Gray correspondence*
