San Francisco, Aug 27 1884.

Dr Gray

Dear Sir:

I should have written to you long ago but have been too busy and contented myself by sending messages by the kindness of Mr Greene. We will send our new species as fast as we extricate them.

Phacelia Rattanii — I send you fruiting specimens from Lake Co. I had named it P. urens, but find it already named in a package given us recently by Mr Rattan.

Mohavea seems to me to have two good species — The form of the flower differs greatly, and the leaves of the large-flowered ones are much narrower than the other.

Clatia Zantiana — Has it been collected since Zantius?

Oenothera Mohavensis — seems to me to differ enough from Oe. graciliflora. The dilated & clasping bases of the leaves are peculiar. Oe. Navadensis Kell. was published and figured in vol II — 227. of our Proceedings.

the large leaf figured evidently
does not belong to it.

I had several other things
to send you but Mr Greene was
in haste to send you Eritrichiums
and I reserved them for next
package. I congratulate you
on the completion of your second
vol synoptical Flora, of which
we received a copy through your
kindness, and we await the third
with as much patience as is compatible
with strong desire.

Respectfully Yours
Mary K. Curran

I had nearly forgotten to thank
you for naming the Eritrichium for me
My own name is Payne, and I
would prefer to have so called any
plant which you may kindly call
for me.

M.K.C.
