

Enclosed is a letter received
lately from the principal of
an "Academy". He has been
informed where your "Structural
& Scientific Botany" can
be obtained.

Wilmington Del,
Oct. 5th 1867

Dear Dr. Gray, I have thought
somewhat upon the piece of
work you ask me to under-
take, and while doubting very
much my ability to make
it what it should be, am
willing to try, at least so far
as the preliminary observations
are concerned. If after this,
you or I become convinced
that the necessary power is
wanting, somebody nearer the
mark will have the benefit
of my notes and observations
so that perhaps the work need
not be delayed much. I
confess I do not get from
your letter exactly the idea

of what is wanted; i.e. whether it is to be strictly scientific or more devoted to the economical uses of our Forest Trees. From what you say about the first chapters I should suppose the former was to be more kept in view. However this can all be arranged in the future. I have first to get matters settled up with M. Lenormand and others with whom I have promised to exchange. I will enter into no more engagements which would be likely to take much time and this will leave me free to make a special study of Forest Trees by which I suppose are ~~meant~~ meant those which are really trees and not shrubs, thus excluding most of the willows

alders, hazels and the like. I am somewhat afraid the Wilmington, N.C. trip will have to be postponed. One thing after another seems to turn up to cause delay. If however the original plan is carried out I will not forget the plants seeds &c wh. you desire.

I notice in new eds of Manual no mention of *Elephantopus tomentosus*, L. If it and *E. Carolinianus*, Willd are forms of the same plant the former name is the oldest and I should suppose thus entitled to the preference.

Ever Truly Yours

Wm M. Canby
