

New Haven, Connecticut,

Feb. 11,

19 10.

Dear Professor Collins:-

Many Thanks for the collection of hepatics. I have enjoyed studying them very much and have found several forms of considerable interest among them. Perhaps the most interesting of all is *Neerisella pilosa*, a rare European species, recently reported from arctic America by Bryhn. Yours is the second station for North America. The specimen that I have named *Fullania Bo-*

lauderii is also remarkable. I have seen ~~a~~ similar plants from Montmorency Falls (Macomber) and from Newfoundland (C. D. Howe and Lang). Unfortunately all lack perianths so that the determination is less certain than I would wish, more especially since *F. Bolanderii* has heretofore been known only from the Pacific Coast region. At the same time the eastern specimens show the curious flagelliform shoots and the cell-structure char-

New Haven, Connecticut,

19

actenistic of *F. Bolanderi*, and there is no eastern species to which they can be referred.

Of the Rhode Island specimens two represent additions to your state flora - *Porella pinnata* and *Cephalozia fluitans* - while two others - *Ricciella fluitans* and *Premlia quadrata* - may now be marked "+". I was especially glad to see these.

Very truly yours,

Alexander W. Evans.
