

ever have a specimen of
Dicranum majus collected
by Dr R. H. True at North Haven
if you have not I will divide
mine with you. Have you
seen *Tortula papillosa* Wils. in
Maine it is a very common thing
to find it on old elms about
here, with *Orthotrichum obtusifolium*
but I cannot find it in
New Hampshire at all.
Perhaps this is near its northern
limit.

Yours Truly

J. W. Huntington
Amesbury
Mass.

Amesbury Jan 28 1904

Dear Mr. Collins

Your postal was
very interesting to me, as I am
handicapped in my moss study
by not having access to publica-
tions on the matter; so I am
often unable to tell whether
a plant is uncommon or not.

I enclose two specimens
which are not very common
here. *Smullystegium Kochii* I
find quite a lot of in certain damp
locations as in orchards, old wells &c.
Hypnum stellatum may be common

I am inclined to think it is,
only I have not found much
of it. I intended to send you
a specimen of a hepatic
Lephalozia jackii from the
first station reported in
America (fide Dr Evans) but it
had turned mostly to dust.

In regard to Maine masses in my
herbarium (I have a small one)
I have about thirty specimens
collected by Mr Chamberlain,
and a few by Mrs Stevens, and
one or two collected by yourself.
I should be pleased to add
to it if possible, Did you

Huntington, John Warren. 1904. "Huntington, John W. Jan. 28, 1904." *James Franklin Collins correspondence*
