

~~The other rather reluctantly giving~~  
admittance to any thing ~~bad luck~~  
I say to the man that invented seasickness  
But our poor little Lubano has been  
on his back the whole way - he fought  
the grub bravely but it wouldn't  
stay put

In one of the bundles of woody specimens  
you will find a few packages of what  
were living orchids (epiphytic) You  
can send them to Kew or to Washing-  
ton or make any other disposition of  
them you think proper if they are alive  
Present my respects to Mrs G.

Very truly  
Yours  
Chas Wright

At Sea Sept 17/37

Dear Dr

We are approaching N.Y.  
hope to be there tomorrow morning  
left St Jago 22nd ult - have made  
a long passage - plenty of eaters -  
head winds but not a good fair  
wind for one hour It is as likely  
as not the vessel will be kept  
at quarantine though we have  
no sick on board & there was none  
when we left I may stay forty-  
eight hours to know the certainty  
of the matter or I may go home  
as soon as I can get away In either  
case I will make arrangements  
to have the botany sent on to  
you as soon as possible - I sup-  
pose it will be necessary for me  
to go to Washington at an early

day to attend to the botany of Behring's  
Strait ~~Baffin~~ Expedition I have  
been thinking of proposing that we  
make a joint labor of it I suppose  
I can do a good deal of the work  
of distribution comparison & the  
manual labor generally as well as  
the description of many of the novelties  
if we find any I don't know what  
the pay is as that will be my only  
income I shall necessarily need  
a considerable portion of it I would  
like your views on the subject Don't  
hesitate to express your mind freely  
for it would be no great sacrifice  
for me to give up the job entirely  
though I think we could do it better  
together But if we undertake it  
I don't mean to stop at the half-way  
house — it shall be pushed through  
if the appropriation holds out

I have five more bundles of plants  
like the first sent which I hope  
you have received & two bundles spec-  
imens of wood These last I propose  
that you shall divide as each  
specimen is enough for two — keep one  
yourself for your trouble & send the  
other to Hooker They are all num-  
bered & in the bundles of specimens  
are corresponding numbers attached  
to portions of foliage flowers or  
fruit — If we can agree upon the  
above plan for a joint publication  
of the Behring's St. Ex. Bot. we  
might at the same time perhaps  
get out a sort of "Florula Culana"  
I shall look for a letter from you  
on my arrival home

I hope Culana quite well but have  
enjoyed the usual rather miserable  
health of a sea voyage — one and  
refusing an outlet to any thing
