

The Charleston Museum

PAUL M. REA, DIRECTOR

CHARLESTON, S. C. June 10, 1920.

Dr. M. L. Fernald,
Gray Herbarium, Harvard University,
Cambridge, Mass.

My dear Dr. Fernald:

I found your letter awaiting me on my return from a botany trip to Beaufort, S. C. As I am going into the pine barrens between the Cooper and Ashley Rivers in two days, I will get fresh sets of the pine barren Hypoxis and send them to you for Miss Brackett. I have watched the plant with considerable interest but have not studied it microscopically. My opinion has been that there was every stage and gradation between it and the long-stalked specimens from Caesar's Head and the mountains. The stalks of the pine barren species average about one and a quarter^{inches}, are generally unbranched and frequently single flowered. Will you not let me know what Miss Brackett finds in regard to this species?

Very truly yours,

Laura M. Bragg.
Curator.
