

Tucson, Arizona.

June 30, 1882.

Dear Dr. Gray:

June, over the most un-
fruitful month of the season in
these interior regions, has this year
been unusually dry, so that my
success in collecting herbarium specimens
has been but meager. Yet I have
a few choice things, as fine flowers
and full-grown pods of *Olneya*, fls.
& *Camellia*, etc.

When kind Dr. Parry advised me
to operate in the vicinity of Maricopa
he directed me to a shrub found by
himself and Parish last December
on the rocky hills ~~of~~ near that
place. He thought it might be an
undescribed species of *Bursaria*. I
dare say he reported it to you, and

and such material as he gets.
Under No 113 I send you (amongst
a few Arizona plants for names)
as complete material as I could obtain.
The trunk for a foot above the ground
is in adult plants about a foot
in diameter, its bark fully an inch
thick. About this height the trunk
divides into a half dozen branches
widely spreading and some ten feet
long; so the shrub is about 10 feet
high and 20 feet broad. Its fls.
are 3-5 merous. On a few individuals
I found the leaves of last year still
adhering to the lower branches. As I
cut my specimens, a thin turpentine
issued pungently, which ignited and
burned with a bright flame, when
I applied a match.

Now I go back to California
to travel with wild trees. Having
still 40 trees 10 ft together there,

I begin to fear that I will not
get back to Arizona as early as the
fall flora will be ready for me.

Please send names to Mr. Patterson,
for a month or two I may be addressed
in care of Academy of Sciences, San
Francisco.

Yours sincerely,

E. G. Bingle.

Pringle, Cyrus G. 1882. "Pringle, Cyrus Guernsey June 30, 1882 [Pringle to A. Gray]." *Cyrus Guernsey Pringle letters to Asa Gray*
