

Charlotte, Vermont.

26, Dec., 1885-

Dear Dr. Gray,

Thanks for yours of the
24th and end of your report.

And here are the notes which it
calls for, —

577. Gilia Pringlei, Gray nsp.

Color of corolla just with pre-
served in my specimen, purple,
I should say. Though abundant
on cool hillsides a few miles west of
Chimualma, not in my acts, partly
because I came upon it late,
about the end of October —

579. Sponma. Can't think it is the same
as 580. Two feet high erect with
numerous branches. I did not

do justice to this genus. So many species,
so apt to close their flowers before I
could reach the mountains. I took
these poor bits one evening, and never
saw the expanded flower. I think the
specimens show the only leaves the plant
was bearing.

317. Physalis microphylla, Gray n. sp.

Yes = 116. Limestone ledges, Santa Cecilia Mts., near Chihuahua. Corolla cream-colored.

179. Pentstemon purpureus, Gray. I think the color of flower bright-red, perhaps "bright-scarlet."

593. Pentstemon. Yes, the only specimen found (late) by a water course among the foot-hills west of Chihuahua. Could easily be secured another season.

656. Lamprocarpa coccinea, Gray n. sp.

Yes, an apt name. Rocky hills near Chihuahua.

Pringle, Cyrus G. 1885. "Pringle, Cyrus Guernsey Dec. 26, 1885 [Pringle to A. Gray]." *Cyrus Guernsey Pringle letters to Asa Gray*
