

Charlotte, Vermont.

31, Dec., 1885.

Dear Dr. Gray,

Nothing more certain than that the ends of Gonosobus stenocephalus are naked. I had more than 50 pods drying in my window stool in Chihuahua, which had been gathered from many different plants, all opened under my care, and I never detected a trace of a cornea!!

Trachiloperum Mexicanum, Gray sp.

Good, and I will try to get flowering specimens next summer.

221. Gilia polycladon. Then may I beg you to see if the Sonoran plant, which went into my distribution of 1884 under this name, is the same?

Here I send tickets for such
plants on your list as will not go
into my sets, excepting the few of which
you have "all" in the sheets (with dates
of collection) in which they were dried.
For them I send blank tickets. Such
tickets as will be printed you shall
have, as soon as they come from the press.

Yours faithfully,

C. L. Pringle.
