

Charlotte, Vermont.  
23, Dec., 1886

Dear Mr. Watson,

Thanks for your report on my plants. Glad you found something of interest in the little lot.

Concerning Agave Pringlei, Engelm.: I have little faith in the species. I believe Dr. Engelm. never described it, and at the last doubted if it was more than a mountain form of A. deserti. In his last letter to Mr. Orcutt he wrote that he could see no difference between the flowers of the two. I never saw A. deserti, so as to be able judge of the two plants. Mr. J. D. Parish, who has had both in his garden, and Mr. Orcutt, who has collected

both, should be able to decide the question.  
I sent Dr. Engelmann a living plant which  
should now be found in Shaw's Garden.

But it is not the same as this Mexican  
(No. 802,) for the L. Cal. plant is paniculate  
while the Mexican is spicate. The flowering  
stems of the latter thru inches thick, and about  
ten feet high, densely <sup>flowered</sup> along the upper half,  
and declined in a singular manner.   
The plant chooses a place upon rocks, — the  
crevices and inaccessible shelves of cliffs.  
If it troubles you, let us put it by till another  
year, when I may have better flowers.

1141. Agave planifolia, n. sp. Stem 4 or 5-feet  
high; six or eight - caudice leaves, the upper  
reduced to bracts; radical leaves of stems flowering  
plants even only four or five, ~~very~~ thick,  
rather succulent and pliant, light- or yellowish  
green. I think your specimen shows clearly  
the character of the peculiar rootstock, —  
several roundish corms two or three inches

in diameter, a new one formed each year  
and each perishing in its turn after three  
or four years.

The young plants were abundant on  
warm, sandy or gravelly banks near streams  
in cañons of Mapula Mts., but I saw only  
eight or ten flower stems.

I shall not fail to send printed  
tickets for the specimens.

Yours sincerely,

C. G. Pringle.

rocky hills s.w. and n.w. from Olihaalua,  
flowers opening only in the night; for never  
could find them open -

1135 *Lapmaria vulgaris*, Linné?
