SYNOPTICAL FLORA OF NORTH AMERICA.

BY ASA GRAY.

Experience having shown that some years must elapse before this work can be completed, and a new impression of the part first published (in 1878) being called for, the two parts, which together comprise all the Gamopetalous Dicotyledons, are now issued in the form of a single volume, under the auspices of the Smithsonian Institution.

Both parts have been corrected, as far as could well be done upon the electrotypes plates; a supplement of eleven pages is added to the very recently published Volume I. Part II., and its full index has been made anew. The tabular enumeration of the contained genera and species has been transferred to the end of the Gamopetalæ. To Volume II. Part I. a supplement of seventy pages is added, and a few pages have been recast; a tabular enumeration of all the gamopetalous genera and species is appended, and a complete index of genera, species, synonyms, &c., making an extension from 402 to nearly 500 pages.

HERBARIUM OF HARVARD UNIVERSITY,
Cambridge, Mass., Feb. 1886.

** To bring the price within the reach of all cultivators of Botany, its price is now reduced one half, viz. to five dollars for the two parts or volumes bound in one, of 974 pages imperial 8vo. The American publishers are Messrs. Ivison, Blakeman, Taylor, & Co., of New York and Chicago. It will also be supplied (by mail when desired) from the HERBARIUM, here, on application to the CURATOR OF THE HERBARIUM. He will also supply, to a limited extent, copies of the *Supplements and Indexes*, in a pamphlet form, for one dollar.
