

Carap. S. R.

June 30. 1923.

My dear Ames,

Your letter of April 6 & the cable reached me  
on the same date, & not the 27<sup>th</sup>, & today, but ten minutes  
ago, I have yours of April 9<sup>th</sup>

By inference therefore, you have received the plants collected in Estrella, but I have not your advice of receipt & await this eagerly, amongst them were two tiny pieces of *Epidendrum*.

This will not be in flower for some months; then if opportunity occurs I will try to get you some. I sent home eight plants to Prothero Morris & they netted me £16. I had never found it till this year; but it is not rare as the hills south west of Cartago & occurs also in the region of La Palma (see Merckle) I have not seen it there myself. Richard Pfeiffer in his Catalogue of CR orchids refers to two varieties & probably the La Palma form differs from that of Cartago in the intensity of the blue-violet stain - the other species, almost indistinguishable in the plant, is I believe Ep. purpureum, the flower is less a dull brownish. of this I mortally collected plants at Lancerio last month & await its flower with interest.

Dare no last month I went to town to  
Polygynia & Paphinia are both rare in my  
experience, of course the trouble is to find these things  
in bloom at the time of ones said in the woods. The  
only way would be to cultivate every plant one finds

except the easily recognizable kinds, & this of course I have begun to do now. But insecurity of tenure has always destroyed ~~the~~ effective results.

I am building a rough residence at the end of our yard, which is a wretched place will only accommodate 3 or 400 plants; at the cotton farm I have in partnership there is magnificent accommodation & splendid natural facilities for an orchid garden, however my partner lives there, so that I can do nothing with it, as he is not at all interested in them, though he enjoys the flowers of the Cattleyas & so forth.

I cannot prepare for any further trips till Dr. Grimes returns my press & the papers, it is most regrettable to me that practically all our work was lost on the San Carlos trip, (I don't think I shall go out again in double harness.) this would have achieved a fine lot of material for you if skilfully undertaken, but it developed into a "passeur" & was incidentally very largely a commercial tour for the Botan. Oriental.

Beyond Orchids, I regret the loss of a magnificent *Bromelia*. This genus is practically confined to the 3000-5000 ft zone & it was surprising to find a healthy one low as some 200 ft. by far the finest in the country - at Lares (6000') many interesting things occur, & from there ~ I suppose I have the *Calanthe* cited as being in CR. the hills are about 20 - the dried peduncle from the apex of the bulb - these I am growing here - epiphytic on mossy trees.

II  
With reference to the Epidendrum of my Kew at which you inquire  
you, will you send me a description, so that I may help you  
if possible with further material, and # also.

I am delighted to know you & Powell gathered, tho'  
this adds to my regret at missing you here. I should much  
like to see his live collection, the Chiriqui region seems  
to have our flora very largely & probably the old man  
would find little new if he came up into our territory.

I dare hope you will publish an acy of your Honduras  
trip with work map & some ecological notes. I suppose  
Brit Honduras has richer possibilities from the projection  
of some of the Guatemalan ranges into its territory.  
I am glad to learn your trip was satisfactory.

Three odd specimens from our San Carlos trip are  
enclosed, #450 is an interesting species that seems new  
to my experience, Olin has the complete plant among the  
remaining things. I send these additional flower parts,  
& they will make with the other, a valid specimen. it is  
not uncommon in the warmer parts of the region.

The Anectochilus? is new to me & must be a very  
rare plant, one half of the plant has in maculated dull  
purple green leaves, as evidently polymorphous, unless  
two species should have disputed the borders of earth  
on which they are united. Fortunately this reached me alive  
& I may hope to send you eventually flowers.

With reference to your kind offer of further Daphne  
another quantity of dried paper would be most welcome,  
as I fear most of those you sent me will not return

from San José, don tells me he gave ~~the~~ my supply, (which  
as I told you we left in Alajuela, as he imagined he had  
a sufficient quantity ahead of us & which we never connected  
with) to one Valerio, with the consoling thought, that he was  
far more likely to be able to help you than I am; well  
may it be so, in the meantime I am without material.

I will convey to him your offer of your publications &  
may say at the same time that #1 has not yet reached me.

The Zeledons are old friends of mine. Don José has  
been for nearly 60 years a keen ornithologist, & I was  
delighted to find that you had called on her wife she  
leaves the Schlechter camp may get you a lot of material,  
tho' it is rather late in the day.

Jurrialba is very extensive Territory. I may make  
some collections in that vicinity as I have rented a  
piece of land in Peralta to plant bananas & that lays  
on the southern banks of the streams of that name,  
I had hoped to go to La Maria de Dota, but it  
will be too late when the dry season comes to hand,  
will have to wait till next April.

Did you see the few orchids I collected in Uganda,  
when you were at Kew, it was a delight to me to see  
an entirely new group of plants - tho' they do not  
approach ours in variety or abundance.

Dahlgren

Your very truly  
C. H. C. Dahlgren
