Recent observations from Xinjiang Autonomous Region, China, 16 June to 5 July 1988

RICHARD GRIMMETT and HELEN TAYLOR

The birds seen in Xinjiang (Sinkiang) Autonomous Region, China, between 16 June and 5 July, 1988 are documented, including the first records for China of Collared Pratincole Glareola pratincola and Savi's Warbler Locustella luscinioides, and the second record for China of Eurasian Reed-Warbler Acrocephalus scirpaceus.

From the 16 June to 5 July 1988 the authors visited, as tourists, the Xinjiang Autonomous Region of western China. Time was spent mainly in the plains along the northern rim of the Tarim Basin and in the vicinity of Bosten Lake.

There is very little published information on the birds of this area. W. L. Abbott visited the northern Tarim Basin in the autumn of 1893 (Richmond 1895) and F. Ludlow collected in the northern basin between Kashi (Kashgar) and Jam near Aksu between 17 November 1929 and 13 April 1930, and again from 15 to 29 September 1930, and also documented the observations and collections of G. Sherriff (Ludlow and Kinnear 1933-1934). Cheng (1987) has summarised other relevant information. Of particular interest, and providing considerable motivation for the visit, was the presence in this part of China of two species of ground jay *Podoces*, namely Henderson's *P. hendersoni* and Biddulphis *P. biddulphi*.

LOCALITIES VISITED

The following were the main localities visited with a brief description of the habitats found.

Where possible, place names used in the text follow the spelling in the *Times atlas of the world* (6th edition), with the names used by Ludlow and Kinnear (1933-1934) in parentheses.

1. Kashi (Kashgar) Oasis; 18-23 June.

This is an extensive and fertile oasis, up to 120 km wide. Birdwatching was concentrated in the following areas:

- (i) Agricultural land west of the city, typical of the oasis with fields mainly of wheat lined by rows of tall poplars *Populus*.
- (ii) A tributary of the Kashi River (the first river that bisects the oasis to the south-west of the city) flanked mainly by rice paddies and grazing pasture. Of particular interest was the northern bank, down-river from

the main Kashi to Sufu road, where there is a large area of reed- and sedge-beds (some on abandoned rice paddies) with cultivated and fallow paddies lined with rows of willow *Salix*. The river is fast-flowing, broken by gravel- and sand-banks.

- (iii) An area of stony desert with sparse low vegetation and low bare hills at Wupah, approximately 50 km south-west of Kashi. This area was visited because it was believed to be Opel, where Sherriff collected Henderson's Ground Jay *Podoces hendersoni* in 1930 (Ludlow and Kinnear 1933-1934).
- (iv) An area of stony desert, tamarisk scrub, dry cultivation, and paddy fields, marshes and grazing pastures along a small river, west of Sufu and approximately 30 km south-west of Kashi.
- (v) An area of stony desert with low scrub and dry cultivation around the abandoned town of Hanoi, on the eastern edge of the Kashi oasis.

2. Aqal Oasis and surrounding desert; 25-27 June.

An elongated oasis west of Aksu; less intensively cultivated than large parts of the Kashi Oasis with many fallow and overgrown fields. To the north of the oasis is a stretch of the piedmont gravel zone (that forms a continuous band between the sandy Taklimakan Desert and the barren foothills of the Tian Shan), where Henderson's Ground Jay was searched for. To the south, is sandy desert that in parts is quite densely vegetated with shrubs including tamarisk *Tamarix* and in other parts is very degraded due to grazing by camels and the removal of vegetation for firewood and fodder.

3. Bosten Lake; 1-3 July.

One of China's largest freshwater lakes. There are extensive reedbeds, particularly on the western side where there are numerous small lakes and meandering canals. The reedbeds provide the raw material for a large paper-making industry in Korla. At the edge of the reedbeds there are cattle-grazing marshes. Time was spent in the south-western corner, staying at the western pumping station, where there is a large fish-rearing pond.

4. Puhui Oasis and surrounding desert; 4-5 July.

A new and rapidly expanding state farm on the outskirts of the main Korla Oasis (52 km from the city). Time was spent at a small salt lake surrounded by freshwater marshes to the west of the village; at a desert poplar forest (apparently a protected area) along the Kongi (Peacock) River with freshwater pools and marshes and a large freshwater reservoir, and in the sandy desert between Puhui and the Korla Oasis. The desert west of Puhui is heavily exploited for firewood and camel grazing.

OBSERVATIONS OF PARTICULAR INTEREST

COLLARED PRATINCOLE Glareola pratincola Two birds were seen in an area of paddy fields, c.30 km south-west of Kashi on 21 June. The birds were in full breeding plumage. They were seen well and showed red under wing-coverts (eliminating Black-winged Pratincole Glareola nordmanni), and dull-brown breast (not peachy-orange) and the tail-streamers extended back as far as the folded wing-tips (thus eliminating Oriental Pratincole G. maldivarum). This species is not listed in Cheng (1987) and this record would seem to constitute the first for China.

SAVI'S WARBLER Locustella luscinioides At least four birds were found singing in the *Phragmites* beds along a tributary of the Kashi River, southwest of Kashi city, between 18 and 23 June. One bird was seen very well and tape-recorded. It was olive-brown above, with creamy-white throat and supercilium and brownish-buff on the underparts, with darker undertail coverts and faint paler fringes to under tail-covert feathers. The song was a low monotonous insect-like trill, characteristic of the species. A further one to two birds were heard singing at Bosten Lake on 2 July.

This species is not listed in Cheng (1987), but is mentioned as a species recorded by Sudilovskaya in the Tien Shan, although not confirmed for China, by Cheng (1976), and these would seem to constitute the first documented records for China. The species was recorded at the same locality at Kashi by H. Dissing, S. Jensen and M. F. Jørgensen in July 1989 (Dissing et al. 1990).

EURASIAN REED-WARBLER Acrocephalus scirpaceus At least eight birds were seen or heard singing in the Phragmites beds along a tributary of the Kashi River south of Kashi between 18 and 23 June. Several birds were seen well and tape-recorded. One bird was seen feeding a recently fledged juvenile on 19th. The adults were dull grey-brown above including rump, without any obvious rufous, olive or greenish tones, and greyish-white on the underparts; legs were grey; primary projection appeared as long as the length of exposed tertials. The rambling and scratching song was characteristic of the species, and the tape-recording has been compared with the recorded songs of other Acrocephalus warblers to eliminate similar species. A further two birds were heard singing at Bosten Lake on 2 July.

This species is listed by Cheng (1987) as a vagrant on the basis of a record for Zhenjiang, Jiangsu Province on 9 October 1921 (Kolthoff 1932). These observations would seem to constitute the only other records for China and the first breeding record for the country. The species was recorded at the same locality at Kashi by H. Dissing *et al.* in July 1989 (Dissing et al. 1990).

OTHER OBSERVATIONS

A full list of species recorded in Xinjiang between 16 June and 5 July 1988 is

given in the appendix. Of special interest are the records of Little Bittern Ixobrychus minutus, Booted Eagle Hieraaetus pennatus and Houbara Bustard Chlamydotis undulata, which are described as very rare in China (Cheng 1987), and White-winged Woodpecker Picoides leucopterus, Saxaul Sparrow Passer ammodendri and Biddulph's Ground Jay Podoces biddulphi, which are central Asian specialities. Despite searching in what was thought to be suitable habitat, there were no sightings of Henderson's Ground Jay Podoces hendersoni.

The authors are grateful to Tim Inskipp and Craig Robson for providing copies of relevant papers and their encouragement, and to Professor Tan Yao-Kuang for access to skins held at the Institute of Zoology, Beijing and for drawing our attention to the note referring to Savi's Warbler in Cheng (1976).

APPENDIX

LIST OF BIRDS RECORDED IN XINJIANG AUTONOMOUS REGION, CHINA, 16 JUNE-5 JULY 1988

Species	1	Loc 2	ality	4	Remarks
Black-necked Grebe				*	5+ at the salt lake, Puhui. Described as rare in China (Cheng 1987).
Podiceps nigricollis					of the sale sale land, I take a best local as the all claims (creating 1901).
Great Crested Grebe			*	*	30+ at Bosten Lake, some with young; pair with young at Puhui.
Podiceps cristatus					, , , , , , , , , , , , , , , , , , , ,
Great Cormorant			*	*	
Phalacrocorax carbo					
Great Bittern			*		3 sightings plus another two 'booming' at Bosten Lake.
Botaurus stellaris					
Little Bittern	*		*		1 female along River Kashi; 7 seen at Bosten Lake and probably fairly
Ixobrychus minutus					common at this site and most likely breeding. Described as very rare in China, as a migrant and winter visitor to Xinjiang Aut. Reg.(Cheng 1987).
Great Egret			*	*	
Egretta alba					
Grey Heron			*	*	
Ardea cinerea					
Black Stork				*	At least 5 at Puhui and frequently seen soaring over the poplar forest
Ciconia nigra					which is suitable breeding habitat. Described as rare in China (Cheng 1987).
Ruddy Shelduck			*	*	100+, including many juveniles on the salt lake at Puhui.
Tadorna ferruginea					
Common Shelduck				*	40+, including many flightless young on the salt lake at Puhui.
Tadorna tadorna					
Mallard			*		
Anas platyrhynchos Gadwall			*		Commonest duck at Bosten Lake.
Anas strepera					
Northern Pintail			*		
Anas acuta					
Garganey			*	*	
Anas querquedula					
Red-crested Pochard			*		
Netta rufina					
Ferruginous Pochard			*	*	
Aythya nyroca					
Black Kite		-	-	-	
Milvus migrans Western Marsh Harrier					
			-		
Circus aeruginosus Common Buzzard		*	*		
Buteo buteo					
Long-legged Buzzard				*	2 displaying over the desert at Puhui.
Buteo rufinus					2 displaying over the desert at I thin.
Booted Eagle	*			*	At least two birds over the main Kashi Oasis. Two birds at Puhui, one
Hieraaetus pennatus	-				displaying and calling over the poplar forest. Described as very rare in China, breeding only in Xinjiang Region (Cheng 1987).
Eurasian Kestrel	*	*	*	*	
Falco tinnunculus					
Northern Hobby	*				
Falco subbuteo					
Common Pheasant			*		Male and female with at least one chick.
Phasianus colchicus					
Houbara Bustard		*			Seen well, about 10 km south into the sandy desert from Aqal. Described
Chlamydotis undulata					as very rare in China (Cheng 1987).
Water Rail	*				
Rallus aquaticus				-	
Common Moorhen	-		*	*	
Gallinula chloropus					

Species	1	Loca 2	ality 3	4	Remarks
Northern Lapwing	*		*		One bird displaying at Kashi.
Vanellus vanellus Little Ringed Plover	*		*		Observed displaying along Kashi River; chicks and juveniles at Boste
Charadrius dubius Kentish Plover			*	*	Lake. 20+ at the salt lake, Puhui including several chicks.
Charadrius alexandrinus					
Common Redshank Tringa totanus	*		*	*	75+ at Bosten Lake, including many recently fledged juveniles
Marsh Sandpiper Tringa stagnatilis			*		
Common Greenshank Tringa nebularia			*	*	
Green Sandpiper		*	*		
Tringa ochropus Common Sandpiper	*				
Actitis hypoleucos Terek Sandpiper			*		
Xenus cinereus					
Black-winged Stilt Himantopus himantopus			*	*	100+ at Bosten Lake, including many juveniles and chicks; common an holding territory at the salt lake, Puhui.
Collared Pratincole Glareola pratincola	*				See main text
Common Black-headed Gull			*	*	Many juveniles at Bosten Lake, but breeding not proven.
Larus ridibundus Yellow-legged Gull			*	*	Many juveniles at Bosten Lake, but breeding not proven.
Larus cachinnans Whiskered Tern			*		Fairly common at Bosten Lake, all in summer plumage although r
Chlidonias hybridus					evidence of breeding. According to Cheng (1987) there are no confirmed records of this species for Xinjiang Region.
Gull-billed Tern Gelochelidon nilotica	*				Parties of 4 and 5 west up Kashi River.
Common Tern	*		*	*	Almost certainly breeding at Bosten Lake, where one juvenile was see
Sterna hirundo Little Tern Sterna albifrons	*		*	*	and at Puhui, where there was a small colony on an island in the salt lake At least 20 pairs breeding on the fish-rearing pond close to the pumpir station at Bosten Lake; many with chicks. Breeding suspected at Puhu
Pallas's Sandgrouse				*	where there was a small colony on an island in the salt lake. 75-100 in two large flocks, and several small groups, coming down
Syrrhaptes paradoxus European Turtle-Dove				*	drink at freshwater streams entering the salt lake at Puhui.
Streptopelia turtur					
Oriental Turtle Dove Streptopelia orientalis			*		
Collared Dove	*				
Streptopelia decaocto Laughing Dove	*				Described as rare in China by Cheng (1987).
Streptopelia senegalensis Common Cuckoo	*	*		*	
Cuculus canorus				*	
Little Owl Athene noctua					
Common Swift Apus apus	*	*	*		
Common Kingfisher Alcedo atthis	*				
Hoopoe Upupa epops	*	*	*		
White-winged Woodpecker Picoides leucopterus				*	At least three in the desert poplar forest at Puhui.
Asian Short-toed Lark Calandrella cheleensis	*	*	*	.*	
Crested Lark Galerida cristata	*	*	*		
Sand Martin	*				
Riparia riparia Barn Swallow	*	*	*		
Hirundo rustica					

Species		Lo	cality		Remarks
	1	2	3	4	
Yellow-hooded Wagtail	*		*		Very common at Bosten Lake, many with young.
Motacilla citreola					very common at bosten Lake, many with young.
White Wagtail	*	*	*		
Motacilla alba					
Isabelline Shrike	*	*	*	*	Juveniles at Kashi, Aqal, and Bosten Lake.
Lanius isabellinus					Juliania at Landa, right, and Double and
Great Grey Shrike			*	*	
Lanius excubitor					
Bluethroat	*		*	*	Recently fledged juveniles at Kashi; many singing at Bosten Lake.
Erithacus svecicus					
Desert Wheatear	*	*		*	Recently fledged juveniles at Kashi.
Oenanthe deserti					
Isabelline Wheatear	*	*		*	Recently fledged juveniles at Kashi.
Oenanthe isabellina					
Bearded Tit			*		Common at Bosten Lake, including many juveniles.
Panurus biarmicus					
Savi's Warbler	*		*		see main text.
Locustella luscinioides					
Eurasian Reed-Warbler	*		*		see main text.
Acrocephalus scirpaceus					
Paddyfield Warbler	*		*	*	
Acrocephalus agricola					
Great Reed Warbler	*		*	*	
Acrocephalus arundinaceus					
Booted Warbler	*				
Hippolais caligata					
Barred Warbler		*			5+ males holding territory in a poplar grove in Aqal town. Described
Sylvia nisoria					rare in China (Cheng 1987).
Desert Lesser Whitethroat				*	Common at Puhui. Described as rare in China (Cheng 1987).
Sylvia curruca minula					
Desert Warbler		*			4+ males holding territory in the gravel desert to north of Aqal.
Sylvia nana				-	
Chinese Hill Warbler	1			*	
Rhopophilus pekinensis				_	
Red-headed Bunting	-	^		*	Common in the agricultural land between Korla and Puhui; otherwi
Emberiza bruniceps					single males at Kashi and Aqal. Described as rare in China (Cher
C P 1P :			4		1987).
Common Reed-Bunting	_ ^		-		
Emberiza schoeniclus		+			
Desert Finch					
Rhodopechys obsoleta	*	*		*	Single hind at Hanni Vashi on 22 6 99: 7 in the depart court of Ag
Saxaul Sparrow Passer ammodendri					Single bird at Hanoi, Kashi on 22.6.88; 7 in the desert south of Aqu
1 asser ammodenari					common in the desert poplar forest and surrounding desert at Puh where a pair was seen feeding young with black berries from a deser
Spanish Sparrow	*	*			shrub, in hole about 2m up in a desert poplar.
Passer hispaniolensis		100			
Eurasian Tree Sparrow	*	*	*		
Passer montanus					
Common Starling		*	*		
Sturnus vulgaris					
Eurasian Golden-Oriole	*	*			
Oriolus oriolus					
Black-billed Magpie	*				
Pica pica					
Biddulph's Ground Jay				*	Family party of at least 6 in the desert between Korla and Puhui. F
Podoces biddulphi					further information see Grimmett (1991).
Carrion Crow	*		*		(*/*//

Key

Locality 1 = Kashi Oasis and surrounding desert; Locality 2 = Aqal Oasis and surrounding desert; Locality 3 = Bosten Lake; Locality 4 = Puhui Oasis and surrounding desert.
