Bedford Park, N. Y. City.

Dear Dr. Kennedy,

We are using for arranging our herbarium of the mosses of the world, the outlines of the genera as given by Engler and Prantl, but as this is still very incomplete, I have numbered them according to Jaegers Adumbratio, the system in which the Kew mosses are arranged. This has enabled me so far to put my hands readily on any genus of exotic mosses in the collections. -

For the Systematic museums, I am arranging a set of specimens according to the Engler and Prantl system, but am not at all satisfied with the meagerness with which they have treated the pleurocappous mosses. However, I follow their sequence for my published lists of mosses of N. America though I should like to make several modifications to agree with Limpricht's Laubmoose, which I think is much more satisfactory than Braithwaite's groupings, not only because they cover a larger flora but because they are less erratic and less Lindbergian.

Thank you for your very kind invitation to Miss Small, she is doing her best to get her lists in good shape and order, and will stop off at Providence on her way home and do some bibliographical work with Miss Day before she calls on you. By that time she will be ready to check off quickly any additions that you may have for her.

With kindest regards believe me yours sincerely,

G. S. Britton
