

BROWN UNIVERSITY  
DEPARTMENT OF BOTANY,  
PROVIDENCE, R. I.

Apr. 19, 1901.

Dear Dr. Kennedy:-

Your two letters at hand. Will try and find time to examine the specimens tomorrow. Fernald told me at last Club meeting that if ms. was in hand by May 1 it was time enough, so I think if you write to him <sup>(or Dr. R.)</sup> and explain reasons etc. he will say it will be all right if we hand it to him at the next meeting (May 3).

I would be glad to know what he says as soon as you hear from him and we can then arrange for a final seance, for I agree with you that we ought to have one.

I inclose list as it now stands. (I suppose alphabetical arrangement is satisfactory is it not?) This ~~list~~ includes the list which you gave me of your additions, and the specimens marked "G. S. K" in pencil are those which rest entirely on your names (i.e. I have found no such specimens among my specimens). The "?" indicate specimens

while for some reason I want to examine a little more carefully.

The *Taylora* is the plant which you collected in the canbren bones; a portion of which you handed to me.

Would it not be better to call the list a preliminary list or something of that sort? Make any annotations you see fit on the list for, of course, it will be copied before sending in.

No special hurry about returning it. Keep it a day or two if you wish.

I still have a good many fragmentary sterile undetermined specimens which if carefully worked out might add a few species, but it will be impossible to attend to them before May 1. They are in all cases fragments which have been separated from other more abundant specimens.

Very truly,

J. Franklin Collins.  
468 Hope St.

P.S. It is my intention to send in another article, besides this list, in regard to some of the more interesting species which have turned up in my own set. Are you thinking of doing the same in regard to any of yours?

Collins, J. Franklin. 1901. "Collins, James F. 19 Apr 1901." *George Golding Kennedy correspondence*
