

Westminster, Vt., Oct. 23, 1903.

Mr. Walter Deane,
Cambridge, Mass.

Dear Sir,—

Yours is rec'd. I will
send you as soon as I can a specimen
of *Phlox subulata*. My things are scat-
tered about and it may be some days,
perhaps longer before I get it, but I have
several specimens. I found it covering
a Cemetery in Stratton, Vt., and have seen
it in several other places.

I cannot add anything more to your
list. I should think Conn. should
give *Hydrophyllum virginicum*. I see it
is given in Bishop's Conn. Flora at
Farmington & Waterbury. I presume Bissell
has it.

How much have you done in the

Rubus line! I want to get hold of all the light in that line that I can. Have you any knowledge of Bigelow's Selosus? It seems to have been a form of hispidus and he tells us in his Boston Flora where he found it.

Perhaps he does in some of his other books. Then his Fruiculosus. What was that?

I wish you would give me a list of the Rubus you have seen wild and where they grew - whether named or unnamed. I have a large number of unnamed ones and I predict that there are 100 good species of Rubus, chiefly blackberries in N. E.

I have found the blue huckleberry in Westminster, Vernon, etc., and it is the common form in Pownal. My mother used to say it was the common one at Hollis, N. H. 70 years ago.

Yours truly,
W. H. Blanchard.

Blanchard, William Henry. 1903. "Blanchard, William Henry Oct. 23, 1903."
