DETERMINATIONS OF SOME TEXAS COLEOPTERA, WITH RECORDS.

By ELBERT S. TUCKER, Museum Assistant in Systematic Entomology,
University of Kansas, Lawrence.

ON account of personal interest in the insect fauna of Texas, due mainly to my first entomological collecting trip in the state (to Galveston, in May, 1904, as a member of a party under direction of Dr. F. H. Snow, for the University of Kansas), the writer consented to identify some beetles from the collection of the Agricultural and Mechanical College of Texas, at College Station, Brazos county, on the request of Prof. A. F. Conradi, then acting state entomologist. As a motive for the work other than the advantage accruing to the college collection, Professor Conradi proposed that a list of determinations thus obtained would be helpful in making up a general list of the Coleoptera of Texas, and the names and records herewith show the results of study of the specimens which he furnished. All determinations were personally made by comparison with named specimens in the collection of beetles of the University of Kansas, together with the aid of literature, excepting those species so indicated in the list, where special credit is given to the authority to whom the specimens were submitted in cases of uncertainty. With the exception of *Balaninus victoriensis* Chitt., all of the beetles were collected in Texas, mostly at the Agricultural and Mechanical College, to which institution they have been returned, less a few duplicates retained by kind permission. The student will notice that many dates of collecting occurred in early spring and, in fact, winter months, which indicates that where mild winters prevail a long season for insect activity is permitted.

The arrangement follows Henshaw's check-list by numbers when given.
