

Rutland, Vt., Nov. 1<sup>st</sup> / 93.

Geo. C. Davenport.

Dear Sir,

I have made several trips to Smuggler's Notch this summer and have got quite a collection of ferns. I have found plenty of *Asplenium viride* and *Woodsia glabella* also *Woodsia hyperborea* and *Aspidium fragrans*.

Part of my *hyperborea* I am sure of and a good deal more I think is right judging from the plants Pringle has shown me and what he has told me about it. But Pringle said he after he had looked his plants all over he sent them to you

for verification and I should like to do the same.

There will be quite a lot of odds and ends of the more common ferns that I shall want to send also.

~~What are you~~ Do you do special work upon the Lycopodiaceae? I have found a Lycopodium in the Notch that I think is at least a variety of Selago if not a new species. If you do not care to look at the Lycopodiaceae I will send them to Prof. Robinson.

Yours truly  
H. H. Eggleston.
