

Bountiful rains having well
begun, which will bring out rapidly
the autumn flora, with which I am
little acquainted I follow my own
inclinations and Dr. Gray's wishes,
and decide not to change base
this ~~season~~ season. So let me come
again and take a field view to me.

I have my new genus, — Pringlea
phytum, Gray, an acanthaceous
shrub of N. Mexico, modest and neat.

I have the most friendly letters
from Will Parish. He is badly broken,
feels that he has lost the season, and
his brother's marriage practically
turns him homeless. They are kind to him
but he thinks best to leave them to their hap-
piness. Am glad my daughter (alas how
little mine!) visits you. Please bear in
mind that she is not yet more than half
disentrained from the influence of her father
and under which she has been reared.
I am anxious about your health.

Faithfully,
C. L. Pringle

Tucson, Arizona.

18 July, 1884.

Dear Mr. Sargent,

Back from a three
weeks trip among the Huachuca
and other mountains, I find with
pleasure your favor of June 28th
with proofs of which I see
that we have secured a few more
good photos; the two of my dear
Santa Rita Mts. I shall especially
cherish. I am annoyed about
the light-streaks and lately
have been trying carefully to
avoid them. The excessive dry-
ness of this climate has caused
certain shrinkings or warping
in some of my holders.

I have now used up more
than half of my plates, and

I put the Census into Dr. Parish's hands (the usual)

and am exposing for plants,
and trees making the landscape
incidental as a back ground,
unless I find some view or
other object of especial interest.
Should I want more plates
toward the end of the season, they
might come to me in their tin
cases returned, might they not?

On the Huachuacas I got
a good lot of *Aspl. monanthum*,
and found a few plants of
Aspl. jaylandifolium, securing
a dozen fronds of 1883. *Pellaea*
marginata I saw here and there
coming up after its summer rest
and looking much like *P.*
gracilis. The fronds of last year
were dead.

Into the box in which I
sent more plates I put a
specimen of an *Asplenium*

(I got 20 specimens) to ask you if it
is *A. Glehnii*. I at first took it for
A. parvulum. Also a small frond,
broken up, of an *Aspid.* - which I
strongly suspect you will call *Gilix-*
mas; though, when gathering it, I was
hoping I had got a *Karwinskiana*.
I have over 40 good fronds of it.

I saw poor dried up plants of *Pol-*
ypodium tricholopis.

I travelled widely over the moun-
tains, exploring several cañons similar
to Smuggler's North, and have con-
cluded that some of Lemmon's finds
were scarce there, and that he ex-
hausted the plants as far as he could.
So you think he got many specimens
of some of them. I have sent home
for his account, that I may know
whether I found his "Fern Album"
cañon. I want to return a month
or so later and secure complete boxes.

Pringle, Cyrus G. 1884. "Pringle, C.G. Jul 18, 1884." *George Edward Davenport correspondence*
