

PRINGLE & HORSFORD,
CHOICE NOVELTIES,
NORTH AMERICAN
PLANTS AND SEEDS,

Charlotte, Vermont,
U. S. A.

My dear friend 11, Feb., 1886.

I am certain that the
fronds of 448 Pellaea are
"annual", getting their growth,
fruiting, and dying down, all
within a few months. I can't
just say that all "die down
during winter", for that country
is so different from ours; but it
amounts to that; for fronds
brought up by fall rains
may survive a frostless
winter and fruit early, but
such will surely die down after.

The fronds of the old fashioned
P. cordata are biennial and
fruit the spring after making
their growth like all Pellaeas
of similarly firm texture.

441 grows 6 to 8 inches high
Your faithful Pringle.

Nothing but the address to be on this side.

Mr. Geo. L. Garrison,
8, Hamilton Place,
Boston, Mass.
