

H

Charlotte, Vermont.

27, Feb., 1890.

Dear Mr. Tavenport:

It is pleasing to learn that you find so much of interest among my ferns. I thought you might want to send some of them to Eaton or Barker; so I put up duplicates. Sometimes I fear that I do wrong in sending so much work to you. Any time you wish me to send to Prof. Eaton, please tell me.

The *Hemionitis* usually fruits large or small; the shape of sterile and fertile fronds the same. It grows in the great barranca near Guadalupe in rich soil of shaded ledges or banks. I got to it late, and secured scarcely

enough material to go around my  
set.

2599 was found on limestone ledges  
of mountains near Monterey.

I trust you will be able to report names  
for these two and for 2591 soon so I can  
send them to the printer.

Have you heard of the death (in conse-  
quence of the grip) of dear Dr. Parry?

Yours faithfully,

C. L. Pringle.

Pringle, Cyrus G. 1890. "Pringle, C.G. Feb 27, 1890." *George Edward Davenport correspondence*
