

CHANDLER SCIENTIFIC DEPARTMENT,
DARTMOUTH COLLEGE,
HANOVER, N. H.

8 Sept. 1885.

Mr. Walter Deane,

Dear sir,

I send you to-day
by Express a box of *Arceuthobium*
pusillum Peck, found on *Picea nigra*
in a sphagnum swamp, Lebanon,
N.H. The trees were more or less
dying & dead - If the specimens do
not get crushed you will find some
of the plants in good fruit, with from
one to four or five berries upon them.
Should Judge Chuschnell care for
any, please share with him -
So you have found *Soledago bicolor* - con-
color.

When at Newport I crushed for you
and in investigating a form of
Nuphar with a red disk - The disk
is commonly yellow -, and a flower
much smaller than typical *Nuphar*
advena, but not *Nuphar californicum*.

Here is a field for investigation -
I saw the same many years ago
in Lake Champlain - this summer
I had no time to work it up -
If you have never been at Newport
you would be amazed at the
vast amount of vegetation in
the lake & in the affluents -
the Barton river, Black River and
one other I now forget.

Between Willoughby & Shelburne
Nantucket you will have added
I doubt not many good things
to your Bot. collection -

With regard -

Yours truly -

Henry G. Jessup.

^{Sept 2 1844}
I spent Aug. 30, 31 & Sept 1 with
Mr. Watson & was pleased to find
him recovered from his Guatemala
fever -

Jesup, Henry G. 1885. "Jesup, Henry Griswold Sept. 8, 1885." *Walter Deane correspondence*
