

Willd. is *C. Pennsylvanica*, but  
in *Hb. Schk.* is what we have  
called *C. varia*! But *Schk.*  
figured Willdenow's plant,  
so that Willd.'s plant must  
be taken at the type. *C. varia*  
in *Hb. Schk.*, as in *Hb. Willd.*, is  
good *C. Emmonsii*. It is  
not strange that Dr Torrey  
and Dr Gray did not rightly  
understand *C. varia* and  
foenea, for both those  
groups were imperfectly  
known then. It was not  
until 1840 that *C. adusta*  
was separated, and then for  
many years it was mis-  
understood.

I have rec'd every one of  
your letters, I think.

Remember me to Mrs. D.  
I shall not invite you to  
write me, and I am glad  
that I shall not! L.H.D.

Leipzig, Nov. 7 1888

My Dear Deane:

Yours of the 21st.  
of Oct. is mine. I was  
glad to hear of you. How  
welcome are news from  
America and my friends  
in this far off land! Or,  
rather, I had better say, in  
these lands! I saw America  
upon a large map to-day,  
and the picture reassured  
me that it does exist, and  
is not the land of dreams  
which it all but seems to  
me! One by one the  
cities and the countries which  
I have known only as points  
and patches of color on my  
atlas, become real to me.  
Saxony is no longer a  
patch upon my map, but

an extent of real soil,  
populated by the most  
prosaic of Dutchmen.  
Day after to-morrow I  
shall reach Hungary if  
all goes well. Then I pull  
out for Italy, making  
the passage of the Alps  
through the Tyrol by way  
of Innsbruck. I am about  
deciding to shorten up my  
trip, for I have really seen  
enough of the country and  
its horticulture for my  
present purpose. I  
must still see the plants  
of Allioni (at Turin)  
and those of Steudel, Michaux  
and Lamarck, and I  
shall take in the garden-

ing of the places I visit in  
so doing; then I shall  
go home.

At Halle, among  
Schkub's carices, I found  
a note left by Dr Gray,  
Aug. 2, 1839! Some of  
Schkub's species do not  
exist, unless they are at  
Philadelphia among  
Muhlenberg's things. *C.*  
*tetralica* is one, and *C.*  
*bullata* another. I par-  
ticularly wanted to see  
these. Schk. and Willd.  
saw each others proofs,  
and they cite back and  
forth, and it is diffi-  
cult to decide which  
has priority. The *C. mar-*  
*ginata* of Muhl. in Herb.

Bailey, L. H. 1888. "Bailey, Liberty Hyde Nov. 7, 1888." *Walter Deane correspondence*
