purser yellow at the tip; on the sides of both mandibles at the base a broad band, which on the upper one is yellow, and on the lower white; orbits red; legs and feet greenish lead-colour.

Total length, $12\frac{1}{4}$ inches; bill, $2\frac{7}{8}$; wing, $4\frac{1}{2}$; tail, $4\frac{3}{4}$; tarsi, $1\frac{1}{4}$.

Hab. Veragua.

Remark.—Nearly allied to *Aulacorhamphus albivitta*; but distinguished from that species by its rich blue throat, by the band at the base of the bill being much broader and yellow on the upper mandible, instead of white, and by the under surface being washed with yellow, while in the other it is pure green.—*From the Proc. Zool. Soc.* Feb. 22, 1853.

Mean temperature of March for twenty-eight previous years...	40°·53
Mean temperature of this month	36°·61
Mean temperature of March 1854	45°·14

Average quantity of rain in March for fourteen previous years 2·52 inches.

The mean temperature of this month is lower than that of March during any of the twenty-eight years of my observations, except in 1837, when it was 36°·54, and in 1839, when it was 36°·33. That of March last year was the highest during the whole period.
