AMPHITRYON.

GENERIC CHARACTER, &c.

Antennæ thickening towards the upper part,
and generally terminating in a clavated tip.

Wings (when sitting) erect, and meeting upwards. (Flight diurnal.)

SPECIFIC CHARACTER.

Blackish Butterfly, with the upper wings spotted with yellow at the tips, the lower wings marked by a yellowish band, and beneath by a row of blue crescents.

This insect is a native of several parts of South America, and is subject to some slight variation as to colour: the plate represents it in its natural size.
