The book is beautifully printed and illustrated and forms an excellent example of the good work that may be accomplished by medical expeditions. The authors are to be congratulated on the success of their labors for they have contributed a most interesting and valuable addition to the literature and knowledge of tropical medicine.

MEDICAL ZOOLOGY IN BRAZIL.—At present marked attention is being paid to parasitology as is evidenced by recent publications noteworthy in form and character. This movement has found its expression both in monographic articles accorded a place in general medical literature and in a special periodical devoted to the subject. Brief comments on these items will be of service to North American parasitologists who may not have seen the original publications as yet.

Archivos Brasileiros de Medecina (Anno iv, nos. 1, 2, 3) contains an extended discussion of hookworm and hookworm disease covering seventeen separate contributions on all phases of the subject, illustrated by nine full-page plates. The work is complete and scholarly in treatment, giving much that is not available elsewhere. Of especial value is the critical bibliography on ancylostomiasis in Brazil.

Memorias do Instituto Oswaldo Cruz, published at Rio de Janeiro, which reached its seventh volume in 1915, includes original articles on protozoology, helminthology, and medical zoology generally. The text is usually printed in Portuguese and French or German in parallel columns. The journal is illustrated by full page plates in heliotype and lithography in colors, which are very successful and deserve high praise. Most articles concern those elements of the fauna of Brazil which are related to the cause and dissemination of disease. A recent number contains also a sketch of Professor von Prowazek accompanied by a fine portrait.

ARCHIVES DE PARASITOLOGY.—Publiées par Raphael Blanchard, Professeur à la Faculté de Médecine de Paris, Member de l'Académie de Médecine.

Les Archives de Parasitologie, imprimées à Lille (Nord), ont dû suspendre leur publication, par suite de l'occupation de la ville de Lille par les armées allemandes.

Le fascicule du tome XVI porte la date du 1^{er} août 1914. Il était remis au chemin de fer, quand la guerre a éclaté. Il a dû être retiré et, depuis lors, n'a pu être distribué.

Voici son sommaire:

P. S. de MAGALHAES, Notes d'helminthologie brésilienne, dixième série (avec 7 figures dans le texte), page 481.

R. BLANCHARD, Notices biographiques, XXIV. Louis-Daniel BEAUPERTHUY, 1807-1871 (avec 2 figures et 7 fac-simile dans le texte), 503.

G. R. BLANC, Sur quelques espèces du genre *Diplotriana* Railliet et Henry (avec 10 fig. dans le texte), 546.

P. MOLA, Cestodes Avium. Contributo alla fauna elmintologica sarda (pl IX), 557.

Les Parasites et les maladies parasitaires dans l'histoire, la poésie et l'art, 579-637.

Notes et Informations, 638.

Table des matières, 639-640.

Le premier fascicule du tome XVII était en bonne voie d'impression; les cinq premières feuilles étaient déjà tirées, au moment de la déclaration de guerre.

Les Archives ne pourront reprendre leur publication régulière qu'après la cessation des hostilités. Elles paraîtront alors par fascicules moins gros et plus rapprochés.

1916. "Medical Zoology in Brazil [Review]." *The Journal of parasitology* 2(3), 148–148. <https://doi.org/10.2307/3271201>.
