

Please look at Nancy's Monograph p. 82. Calamagrostis stricta, Trin.  
Do you understand why he says "varies much less than in C. stricta"?  
Should it read "robusta"? And why does he not give New England habitats,  
such as, Mt Washington, Mt. Willard, Mt. Willey, Snuggles Notch &c.?  
I think he has had it from some of us, from New England. He only  
quotes Labrador, Turner.

*Agrostis scabra*, var. *montana*, Tuck. = *A. canina*, var.  
*Nooæ-Angliae* of this check-list. probably, and certainly = *A. Nooæ-Angliae*,  
Vesey, in Monograph of U.S. & Brit. Grasses, Part I. p. 76.  
I think you have had it from me, coll. on Mt. Washington.
