OPINION 1104
RELATIVE PRECEDENCE OF CORNUFER TSCHUDI, 1838, AND PLATYMANTIS GUNTHER, 1858 (AMPHIBIA SALIENTIA)

RULING.- (1) Under the plenary powers
(a) All fixations of type-species for the genus Cornufer Tschudi, 1838, hitherto made are hereby set aside and the nominal species Halophila vitiensis Girard, 1853, is hereby designated as type-species of that genus;
(b) the specific name unicolor Tschudi, 1838, as published in the binomen Cornufer unicolor, and all uses of that name prior to its publication by Stejneger, 1904, in the binomen Eleutherodactylus unicolor, is suppressed for the purposes of both the Law of Priority and the Law of Homonymy;
(c) the generic name Platymantis Günther, 1858, is to be given precedence over the generic name Cornufer Tschudi, 1838, by any zoologist who considers that the type-species of those two nominal genera belong to the same taxonomic genus.

2. The following generic names are hereby placed on the Official List of Generic Names in Zoology with the Name Numbers specified:
(a) Eleutherodactylus Duméril & Bibron, 1841 (gender, masculine), type-species, by monotypy, Hylodes martinicensis Tschudi, 1838 (Name Number 2056);
(b) Platymantis Günther, 1858 (gender, masculine), type-species, by subsequent designation by Zweifel, 1967, Platymantis pliciferus Günther, 1858, with an endorsement that it is to be given precedence over Cornufer Tschudi, 1838, by any zoologist who considers the type-species of those nominal genera to belong to the same taxonomic genus (Name Number 2057);
(c) Cornufer Tschudi, 1838 (gender, masculine), type-species, by designation under the plenary powers in (1) (a) above, Halophila vitiensis Girard, 1853, with an endorsement that any zoologist who considers the type-species of this genus and of Platymantis Günther, 1858, to belong to the same taxonomic genus shall give precedence to Platymantis over Cornufer (Name Number 2058).

(3) The following specific names are hereby placed on the

Bull. zool. Nomencl. vol. 34, part 4, February 1978
Official List of Specific Names in Zoology with the Name Numbers specified:

(a) *martinicensis* Tschudi, 1838, as published in the binomen *Hylodes martinicensis* (specific name of type-species of *Eleutherodactylus* Duméril & Bibron, 1841) (Name Number 2632);

(b) *corrugatus* Duméril, 1853, as published in the binomen *Hylodes corrugatus* (Name Number 2633);

(c) *inoptatus* Barbour, 1914, as published in the binomen *Leptodactylus inoptatus* (Name Number 2634);

(d) *unicolor* Stejneger, 1904, as published in the binomen *Eleutherodactylus unicolor* (Name Number 2635);

(e) *vitiensis* Girard, 1853, as published in the binomen *Halophila vitiensis* (specific name of type-species, by designation under the plenary powers in (1) (a) above, of *Comufer* Tschudi, 1838) (Name Number 2636).

(4) The specific name *unicolor* Tschudi, 1838, as published in the binomen *Comufer unicolor*, as suppressed under the plenary powers in (1) (b) above, is hereby placed on the Official Index of Rejected and Invalid Specific Names in Zoology with the Name Number 1034.

HISTORY OF THE CASE Z.N.(S.) 1749

An application for the suppression of the generic name *Comufer* Tschudi, 1838 was first received from Dr Richard Zweifel (American Museum of Natural History, New York) on 28 March 1966. It was sent to the printer on 13 June 1966. The subsequent history is explained in the following report which was prepared by Dr L.B. Holthuis (then Vice-President of the Commission) at the request of Dr W.D.L. Ride (then President of the Commission) and sent to the members of the Commission when they were invited to vote on the case.

REPORT BY DR HOLTHUIS

1. The original application in this case was submitted by Dr. Richard Zweifel (1966, *Bull. zool. Nom.* vol. 23: 167, 168). It concerned the generic name *Comufer* Tschudi, 1838 (type-species, by monotypy *Comufer unicolor* Tschudi, 1838), which until 1966 had been used for a genus of ranid frogs and was considered close to or synonymous with the genus *Platymantis* Günther, 1858 (type-species, selected by Zweifel, 1967, *Platymantis pliciferus* Günther, 1858). Zweifel (1966) showed that the type specimen of *Comufer unicolor* Tschudi is not a ranid frog but that it belongs to the family
LEPTODACYLIDAE and should be placed in the genus *Eleutherodactylus* Duméril & Bibron, 1841.

The consequences of this discovery were that:

a. The genus until then named *Cornufer* Tschudi, 1838, should have to bear a different name, either *Platygyrtis* Günther, 1858 (if *Platygyrtis pliciferus* is considered to belong to *Cornufer* auct.) or a new name.

b. The genus which until then had been known as *Eleutherodactylus* Duméril & Bibron, 1841, should have to bear the name *Cornufer* Tschudi, 1838.

c. The species name *Eleutherodactylus unicolor* Stejneger, 1904, becoming a junior homonym of *Cornufer unicolor* Tschudi, 1838, had to be replaced.

In order to prevent confusion Dr. Zweifel, in the above cited application requested the Commission to suppress for the purposes of the Law of Priority, but not for those of the Law of Homonymy, both the generic name *Cornufer* Tschudi, 1838, and the specific name *unicolor* Tschudi, 1838 (as published in the binomen *Cornufer unicolor*). Dr. Zweifel’s application was unanimously supported by the Nomenclature Committee of the American Society of Ichthyologists and Herpetologists (1967, *Bull. zool. Nom.* vol. 24(3): 192).

The granting of this request would result in the total suppression of the generic name *Cornufer*, which then could not be used for any zoological genus. A further consequence would be the impossibility of using the specific name *unicolor* in the genus *Cornufer* or in genera that are considered synonymous with it (in the present case also the genus *Eleutherodactylus*). Although the total suppression of *Cornufer* was according to the intention of Dr. Zweifel, the action concerning the specific name *unicolor* ran counter to Dr. Zweifel’s clearly stated intention of saving the name *Eleutherodactylus unicolor* Stejneger, 1904. The incorrect wording of the proposal concerning the name *unicolor* was at that time overlooked.

2. Darlington, Inger, Mayr and Williams (1967, *Bull. zool. Nom.* vol. 24: 192) while agreeing with Zweifel that the widely used name *Eleutherodactylus* had to be saved, did not want to see the generic name *Cornufer* disappear. In order to retain it for the genus of ranid frogs for which it had so far been used, they proposed that the Commission should designate under its plenary powers the species *Halophila vitiensis* Girard, 1853, to be the type-species of the genus *Cornufer* Tschudi, 1838. Their reason for wishing to save *Cornufer* was that that name had been widely used in zoogeographic and taxonomic literature, and until 1966 had been
used by all authors dealing with the genus, whether or not they considered *Platymantis* Günther, 1858, a subjective synonym.

3. On 12 June 1968 the Secretary sent a voting paper (V.P.(68)17) to the Commission requesting them to cast their vote either for Dr. Zweifel’s (1966) original application, or for the emended form of it submitted by Dr. Darlington, et al. (1967). The Commission adopted (19 votes to 2) the solution advocated by Darlington et al.

4. During the voting period the Secretary discovered that the wording in the concrete proposals of both alternatives was such that one of the objects of both Zweifel’s (1966) and Darlington’s (1967) proposals, namely the validation of the specific name *Eleutherodactylus unicolor* Stejneger, 1904, could not be attained (see the last part of par.1 above). Thereupon the Secretary, acting under Art. IIIC (12) of the By-Laws, suspended the case, considering that the aspect of it, which asked for the preservation of the name *Eleutherodactylus unicolor* Stejneger, had been insufficiently considered in the voting paper. The Secretary therefore decided to call for a new vote on an emended voting paper.

5. As explained by the Secretary, a regrettable delay caused him to reopen the case only as late as 1975, when he placed it in its entirety before the Commission and the zoological public (Melville, 1975, *Bull. zool. Norn.*, vol. 32(1): 52-55).

6. One of the unexpected consequences of the long delay in reopening the case proved to be that in the meantime (1967-1975) herpetologists had followed Zweifel in rejecting the name *Cornufer* and in using the name *Platymantis* for the ranid genus in question; the name *Cornufer* was not used at all during that 9 year period. This fact was brought forward by Melville in reopening the case.

7. In Melville’s (1975:54-55) new presentation of the case the original proposal by Zweifel (but corrected to allow for the validation of *Eleutherodactylus unicolor* Stejneger) was indicated as Alternative A, and the proposal by Darlington et al. (corrected in the same way) as Alternative B.

8. Two reactions to Melville’s account were subsequently published: Mayr (1975, *Bull. zool. Norn.* vol. 32: 78-79) strongly supported Alternative B. Tyler (1976, *Bull. zool. Norn.*, vol. 32: 201) supplied additional evidence that the name *Platymantis* in the period 1967-1975 had completely replaced *Cornufer*, and he advocated the adoption of Alternative A. Also the Nomenclature Committee of the American Society of Ichthyologists and Herpetologists indicated that their views on the case had not changed, so that they can be considered to support Alternative A.
The above is a complete review of the published evidence in this case.

9. In a number of letters addressed to the Secretary and the President, Commissioner Mayr raised the following objections to the procedure followed by the Secretary in the present case.
   a. In the first place Dr. Mayr thought that the vote on the substance of the proposal (viz., whether or not the generic name *Cornufer* should be suppressed) was in no way influenced by the discovery of the error in the voting paper (which error concerned only the status of the specific name *Eleutherodactylus unicolor* Stejneger), and that therefore this vote should stand and no new vote should be taken on this part of the proposal.
   b. In Dr. Mayr's opinion the use of the name *Platymantis* in preference to *Cornufer* after 1968 was illegal; his argument was based on Article 80 of the Code, which states that when a case is under consideration by the Commission, existing usage is to be maintained until the decision by the Commission is published.
   c. As the By-Laws in certain points are obscure, Dr. Mayr asked the President to make a Ruling defining the meaning of the term "during voting" in By-Laws Art. IIIC (12), in order to make certain whether the Secretary could call for a new vote on a case after most of the votes on the original voting had already been cast.
   d. Dr. Mayr also asked for a Ruling by the President stating whether, if under Art. IIIC (12) of the By-Laws a new vote is called for, this vote should concern the entire case, or only that part that is influenced by the "new facts" found.

10. The President's Rulings in answer to Dr. Mayr's request were the following (dated 24 June 1976).
   a. On the point raised by Dr. Mayr in Par. 9 c above the President ruled that "during voting" has to be interpreted strictly, meaning "between and including the two dates shown on the voting paper". As the Secretary stated that he discovered the error during this period, his action cannot be disqualified on that account.
   b. On the point raised in par. 9 d above the President ruled that the evidence uncovered by the Secretary did not, strictly speaking, justify his calling for a new vote, and that an opinion on the case incorporating the result of the vote of 12 June - 12 September 1968, should be prepared, unless the Commission authorized the Secretary to have a new vote called on this case.
   c. Thirdly the President ruled that the following procedure is to be applied in this case:
      The Secretary to issue a Voting Paper:
      (i) seeking suspension of By-Law IIIA (2) (d) to allow the Secretary to withhold issuing an Opinion consequent upon
the vote taken on Z.N.(S.) 1749;
(ii) conveying to the Commission its earlier decision and seeking either
   (a) confirmation of it, or
   (b) adoption of one of three alternatives.

11. The President thereupon, with the approval of the Secretary and Dr. Mayr, requested me to draw up the text to accompany the Voting Paper mentioned in par. 10 c above, myself not being directly involved in the controversy around this case. I accepted and now submit to the Commission the requested text, which I have drawn up as objectively as possible.

12. Having sketched in the previous paragraphs the history of the case up to the present moment, I will continue now to discuss the various actions requested from the Secretary in par. 10 c, which will be found in the accompanying Voting Paper.

13. The reasons for the withholding of an Opinion consequent upon the 1968 vote taken on Z.N.(S.) 1749 (as mentioned in par. 10 (c) (i) above) are obvious. Under this Opinion the specific name unicolor Stejneger, 1904 (as published in the binomen Eleutherodactylus unicolor) would become an invalid junior homonym of the specific name unicolor Tschudi, 1838 (as published in the binomen Cornufer unicolor), a result that all parties involved in this case sought to avoid. As a consequence the Secretary, immediately upon publication of the Opinion, has to start an action trying to get the Commission to publish a new Opinion cancelling part of the first, in order to validate the specific name unicolor Stejneger. By withholding the Opinion and calling a new vote on the emended proposals, time, printed space, and money can be saved and the same end achieved, while the other way might cause the Commission to be held to ridicule by the zoological public.

14. If the Commission allows the Secretary to withhold the Opinion on the 1968 vote and to call for a new vote on emended proposals, three alternatives will be offered under the new vote. Two of these alternatives are set out in Bull. zool. Nom. vol. 32 (1975): 54, 55 as Alternative A and B, except that there should be added to par. (1) (b) of both, after the words “Cornufer unicolor”, the following words “and all usage of this name prior to the publication of the name Eleutherodactylus unicolor Stejneger, 1904”. These two alternatives, which are the subject of the present controversy, will be dealt with here first.

15. The controversy reflected by the two Alternatives A and B centres round the question whether or not the generic name Cornufer be allowed to stand in the sense in which it was used prior to 1967.
16. In Alternative B the arguments in favour of making the
generic name *Comufer* the valid name for the genus, to which it
usually has been applied, are:

a. Until 1954 the generic names *Comufer* and *Platymantis*
were both widely used for two supposedly distinct ranid genera. In
1954, in a major revision, Inger (1954, *Fieldiana Zool.*, 33)
synonymized the two genera, and the name *Comufer* was then used
for the combined genus. Most herpetologists adopted this
taxonomic and nomenclatural view, a few continued after 1954 to
consider the genera distinct and used the pre-1954 nomenclature.
Only in 1967 the name *Comufer* was shown to apply to a
leptodactylid frog. From 1838 to 1967 thus the name *Comufer* was
uninterruptedly in use for the ranid genus or for part of it. The
name *Platymantis* was in general use up to 1954, and between 1954
and 1967 replaced by *Comufer* by those authors who considered
the genera synonymous (e.g., by Brown (1965, *Breviora*: 218), who
listed all the species).

b. In 1968 the Commission voted (19 to 2) to designate a
type species for *Comufer* to make its continued use in the until
then accepted sense possible. The vote was not published and the
decision of the Commission therefore not legalized, because an
error was discovered in the voting paper, which error had nothing to
do with the status of the generic name *Comufer*.

c. As until 1968 the name *Comufer* has been continuously
used for the genus or part of it, and as the Commission in that year
agreed to validate this name, it seems illogical and wrong to change
the vote now.

d. The name *Comufer* was not only used in herpetological
literature, but was also well known in zoogeographic literature as it
denoted a genus of frogs with a very peculiar distribution (New
Guinea, Solomon Islands, Fiji). Therefore changing this name will
also have repercussions in zoogeography.

e. The fact that the generic name *Platymantis* since 1967 has
been used by all herpetologists in preference to *Comufer* is illegal
according to Article 80 of the Code, and therefore should be
disregarded.

f. For authors who do not recognize the synonymy of the
generic names *Comufer* auct. and *Platymantis* Günther under the
present Alternative the two names can both be used, while under
Alternative A a new game should then have to be proposed for
*Comufer* auct.

17. In Alternative A the arguments in favour of totally
suppressing the generic name *Comufer* are the following:

already stated, that the "use of the name *Cornufer* for the ranid frogs has not achieved stability", while after 1967 that name has been rejected by all herpetologists publishing on the genus, as they were under the impression that the name was invalid (between 1967 and 1976 21 papers using the name *Platymantis* for the genus have been published, not a single author used *Cornufer* in that period).

b. The name *Platymantis*, far from being an obscure name, was widely used before 1954, when *Platymantis* and *Cornufer* were considered distinct genera. *Platymantis* was only replaced by *Cornufer* in the short period from 1954 to 1967, when the two genera were synonymized by most herpetologists and the name *Cornufer* was thought to be the valid name for the genus.

c. The action of authors to use the name *Platymantis* after 1967 cannot be considered illegal as *Platymantis* was a widely used generic name; even in the period 1954-1967 some authors, still considering the two genera distinct, used *Platymantis* for one. There was therefore an existing usage of *Platymantis*.

d. The fact that the Commission in 1968 voted for the retention of the name *Cornufer* for *Cornufer* auct., shows that the Commission by so doing made an error of judgement, as the practice showed that the acceptance of the name *Platymantis* for the genus was both immediate and universal. It is fortunate therefore that the Commission now still has the opportunity to rectify its error.

e. *Platymantis*, like *Cornufer*, has been used in zoogeographic treatises, e.g., by Wallace (1876, *The geographic distribution of animals*, 2: 419) and Darlington (1957, *Zoogeography*: 507), showing both names to be important in zoogeography. The genus occupies such a restricted area that its distribution illustrates only a small facet of the whole zoogeography, and the change of its name will certainly not cause an enormous upheaval in zoogeographic literature.

f. It seems a retrograde step to reinstate a name which has been rejected by all authors of the last decade, and such an action by the Commission may be regarded by zoologists as unnecessarily pedantic and might be interpreted to show that the Commission has lost contact with reality.

18. The third alternative (Alternative C) was suggested by the President and has the same effect as Alternative A, except that it allows authors, who think *Cornufer* auct. and *Platymantis* to be distinct genera, to use the generic name *Cornufer* for one of them. This action does away with the objection raised in par. 16 f above.

19. The above account gives a short outline of the present case. Commissioners are urged to consult the parts of the *Bulletin*

20. The ruling given by the President and quoted in paragraph 10c was made redundant by a revision of the By Laws at the Bangalore meeting of the Commission. Under By Laws 24 and 25, the Council has voted to cancel the vote on V.P. (68)17. The way is therefore now open for the Commission to take a new decision on the case by voting for one or other of the following three courses of action:

Alternative A

(1) to use its plenary powers
   (a) to suppress the generic name *Cornufer* Tschudi, 1838, for the purposes of the Law of Priority but not for those of the Law of Homonymy;
   (b) to suppress for the purposes of both the Law of Priority and the Law of Homonymy the specific name *unicolor* Tschudi, 1838, as published in the binomen *Cornufer unicolor*, and all the usages of this name prior to the publication of the name *Eleutherodactylus unicolor* Stejneger, 1904;

(2) to place on the Official List of Generic Names in Zoology
   (a) *Eleutherodactylus* Duméril & Bibron, 1841 (gender: masculine) type-species, by monotypy, *Hylodes martinicensis* Tschudi, 1838;
   (b) *Platymantis* Günther, 1858 (gender: masculine) type-species by subsequent designation by Zweifel, 1967, *Platymantis pliciferus* Günther, 1858;

(3) to place on the Official List of Specific Names in Zoology
   (a) *martinicensis* Tschudi, 1838, as published in the binomen *Hylodes martinicensis* (specific name of the type-species of *Eleutherodactylus* Duméril & Bibron, 1841);
   (b) *corrugatus* Duméril, 1853, as published in the binomen *Hylodes corrugatus* [the oldest available name for the type-species of the genus *Platymantis* Günther, 1858];
   (c) *inoptatus* Barbour, 1914, as published in the binomen *Leptodactylus inoptatus* [the oldest available name for *Cornufer unicolor* Tschudi, 1838];
   (d) *unicolor* Stejneger, 1904, as published in the binomen *Eleutherodactylus unicolor*;

(4) to place on the Official Index of Rejected and Invalid Generic Names in Zoology the generic name *Cornufer* Tschudi, 1838,
as suppressed under the plenary powers in (1) (a) above;
(5) to place on the Official Index of Rejected and Invalid Specific Names in Zoology the specific name *unicolor*-Tschudi, 1838, as published in the binomen *Cornufer unicolor*, and all usages of this name prior to the publication of the name *Eleutherodactylus unicolor* Stejneger, 1904.

**Alternative B**

(1) to use its plenary powers
(a) to suppress all designations of type-species for the genus *Cornufer* Tschudi, 1838, prior to the decision now to be taken and, having done so, to designate *Halophila vitiensis* Girard, 1853, as the type-species of that genus;
(b) as (1)(b) in Alternative A above;
(2) to place on the Official List of Generic Names in Zoology
(a) and (b) as in A above;
(c) *Cornufer* Tschudi, 1838 (gender: – masculine), type-species, by designation under the plenary powers in (1) (a) above, *Halophila vitiensis* Girard, 1853;
(3) to place on the Official List of Specific Names in Zoology
(a) to (d) as in A above;
(e) *vitiensis* Girard, 1853, as published in the binomen *Halophila vitiensis* (specific name of the type-species, under the plenary powers, of *Cornufer* Tschudi, 1838);
(4) as (5) in A above.

**Alternative C**

(1) to use its plenary powers
(a) as in B above;
(b) as in A and B above;
(c) to rule that the generic name *Platymantis* Günther, 1858, be given precedence over the generic name *Cornufer* Tschudi, 1838, by those authors, who consider the type-species of these two nominal genera to belong to the same taxonomic genus;
(2) to place on the Official List of Generic Names in Zoology
(a) as in A and B above;
(b) as in A and B above, with the addition of the following words: with the annotation that this generic name shall be given precedence over *Cornufer* Tschudi, 1838, by those authors who consider the type-species of these two nominal genera to belong to the same taxonomic genus;
(c) as in B above, with the addition of the following words: with the annotation that authors who consider the type-species of this nominal genus and of *Platymantis* Günther,
1858, as belonging to the same taxonomic genus, shall give precedence to the generic name *Platymantis* over that of *Cornufer*.

(3) and (4) as in B above.

DECISION OF THE COMMISSION

On 1 July 1977 the members of the Commission were invited to vote under the Three-Month Rule, in Part 1, for or against the use of the plenary powers in this case, and in Part 2, for one of the three alternatives offered by Dr Holthuis. At the close of the voting period on 1 October 1977 the state of the voting was as follows:

**Part 1**

Affirmative votes - twenty (20) received in the following order: Vokes, Eisenmann, Melville, Willink, Heppell, Starobogatov, Mroczkowski, Holthuis, Nye Rohdendorf, Binder, Corliss, Dupuis, Welch, Cogger, Brinck, Bayer, Sabrosky, Ride, Kraus

Negative Votes - none (0).

**Part 2**

For Alternative A - two (2): Cogger, Sabrosky

For Alternative B - three (3): Heppell, Dupuis, Brinck

For Alternative C - fifteen (15) received in the following order: Vokes, Eisenmann, Melville, Willink, Starobogatov, Mroczkowski, Holthuis, Nye, Rohdendorf, Binder, Corliss, Welch, Bayer, Ride, Kraus.

Professor Habe returned a late affirmative vote in Part 1 and a vote for Alternative B in Part 2. Professor Alvarado returned a late Affirmative Vote in Part 1 and a vote for Alternative A in Part 2.

No voting papers were returned by Commissioners Bernardi, Tortonese or Lemche.

unicolor, Eleutherodactylus, Stejneger, 1904, Report U.S. Nat.
Mus. for 1902: 597
vol. 6: 423.

The following is the original reference to a designation of
type-species for a nominal genus accepted in the ruling given in the
present Opinion:
of Platymantis pliciferus Günther, 1858, for Platymantis Günther,
1858 by Zweifel, 1967, Copeia (1967): 120

CERTIFICATE
I certify that the votes cast on voting paper (77)11 were cast
as set out above, that the proposal contained in that voting paper
has been duly adopted under the plenary powers, and that the
decision so taken, being the decision of the International
Commission on Zoological Nomenclature, is truly recorded in the
present Opinion No. 1104.

R.V. MELVILLE
Secretary
International Commission on Zoological Nomenclature
London
3 October 1977
