characters of a true mould. They are not reproduced at the death of the animal. This substance differs moreover by its internal characters from the parasitic Cryptogamia, which are in other insects signs of disease and of death.—*Bibliothèque Universelle*, June 1849.

METEORS.

On the 24th, about 8½ P.M., I saw two fine meteors in a north-east direction, one about ten minutes after the other. The former seemed to burst like a sky-rocket and fall a little way; the latter to shoot in a north direction and fall to the horizon in pieces of blue colour. On the 30th, a little before 7 P.M., a very splendid one was seen in this parish and also in Kirkwall, which is nearly twenty miles off. Here it appeared first near the zenith and travelled westward.—
