wing-coverts and scapulars having the upper vanes deep black, margined and lined with rufous, the lower vanes grayish freckled, and blotched with black, while the shafts are dull whitish.

Tertiaries on their upper vanes with broad fulvous margins; feet and legs pale; bill black; irides chocolate-brown.

Length 8 inches, wing 5 inches, tail 2 inches, tarsus $1\frac{3}{10}$ ths, ridge of bill $\frac{6}{10}$ ths, from angle of mouth $\frac{7\frac{1}{2}}{10}$ ths.

This appears to be an undescribed species of that group of quails which so much resemble our common *O. virginianus*. The present however is readily distinguished from that species by its much longer bill and very short tail, as well as its general markings, particularly beneath; the breast and sides being of a plain fawn-colour, or pale rufous. The only specimen from which I describe was brought from Jalapa, Mexico, by Mr. Pease. It does not appear to be quite adult, and the markings about the head and throat may be somewhat different in the old bird; still however its characters are sufficiently marked. Judging from description, it must very nearly resemble the *O. pectoralis* of Gould; but besides the difference of markings, he makes no mention of that species having a crest. The length of the bird, as well as of the wing, is in this also just one inch greater, which would hardly be the case in a young bird.—*Proceedings of the Academy of Natural Sciences of Philadelphia*, vol. iv. p. 77.

Descriptions of two new Californian Quadrupeds.

By WILLIAM GAMBEL, M.D.

Dipodomys agilis. Colour above yellowish brown, mixed with dusky; beneath pure white, extending half-way up the sides. Head elongated, tapering from the ears to a sharp point. Ears nearly round, sparsely hairy. Eyes large, dark brown. A large pouch on each side of the head, opening externally on the cheeks. Both hind- and fore-feet with four toes and the rudiment of a fifth. The hind-legs very long and strong. Tail very long, slender, covered with hair, and ending in a pencillated tuft.

Length $10\frac{1}{2}$ inches, including the tail, which is $6\frac{1}{2}$ inches.

Dental system:	Teeth	$\left\{ \begin{array}{l} 10 \text{ upper.} \\ 20. \\ 10 \text{ lower.} \end{array} \right. \left\{ \begin{array}{l} 2 \text{ incisors.} \\ 8 \text{ molars.} \\ 2 \text{ incisors.} \\ 8 \text{ molars.} \end{array} \right.$

In the upper jaw the incisors are divided by a longitudinal furrow.

This beautiful Jerboa-like animal is an abundant inhabitant of the vineyards and cultivated fields of the Pueblo de los Angeles, Upper California.

Like the other pouched animals, it forms extensive burrows, traversing the fields in different directions, and is only dislodged during the process of irrigation. They leap with surprising agility, sometimes the distance of ten feet or more at a spring, and are difficult to capture.

Mus californicus. Dark gray, lighter about the head and shoulders, above tinged with light brown, on the sides almost fulvous,

beneath almost white. Fore-feet with four toes and the rudiment of a fifth. Hind-feet with five toes. Tail nearly 5 inches in length, pretty thickly covered with short rigid hairs. Head acutely conical; ears large, rounded, thin, sparsely hairy, 1 inch in length and $\frac{5}{8}$ ths in breadth. Length of the body $4\frac{3}{4}$ inches. Old male: bristles of the nose $2\frac{1}{2}$ inches.

I captured but a single specimen of this species in a field near Monterey, Upper California, which, with those of the former, I had the misfortune to lose.—*Ibid.*

METEOROLOGICAL OBSERVATIONS FOR FEB. 1849.

Chiswick.—February 1. Frosty: foggy: rain. 2. Drizzly: hazy: rain. 3. Hazy and damp: densely overcast. 4. Overcast. 5. Very fine: overcast. 6. Hazy: densely overcast. 7. Overcast. 8. Very fine: clear. 9. Fine: overcast. 10. Overcast: clear at night. 11. Clear: very fine: barometer unusually high: clear and frosty at night. 12. Frosty and foggy: fine: clear and frosty. 13. Dense fog: fine at noon: foggy. 14. Foggy: fine. 15. Very fine. 16. Foggy: clear at night. 17. Frosty: exceedingly fine. 18. Overcast. 19. Overcast: fine. 20. Slightly overcast: cloudy: rain. 21. Cloudy and fine: rain. 22, 23. Fine. 24. Drizzly: rain: lightning in the evening: densely overcast. 25. Hazy: boisterous, with rain and thunder: constant heavy rain at night. 26. Cloudy and fine: frosty. 27. Frosty: cloudy and fine: clear. 28. Boisterous, with heavy rain.—On the 11th the barometer was higher than it has ever been observed in this locality.
