tells him that he remembers having taken notice of the plant fifty years since; another man vouches for forty years.

The plant occupies a space of about 20 feet by 5 or 6, and is not found in any other part of St. Agnes, nor, as far as Mr. Mayne knows, in any of the other islands. Twenty years since St. Agnes, as he has ascertained, could not boast of even one garden, and therefore floral culture could hardly have caused its introduction more than fifty years since, when potatoes and rye and an occasional cabbage were the *only things* grown in the island by people who lived wholly by the sea.

Strange birds often visit the Isles during the south-easterly winds, and may, as Mr. Mayne justly suspects, have brought seeds from the continent. He adds, that "a brother clergyman, living at Marazion, near Penzance, has some plants of it growing in his garden. He has never seen the plant elsewhere, and is quite at a loss to account for their presence." Can this be Dr. Penneck's station noticed in 'Cybele Britannica,' vol. ii. p. 232?

I leave it to other botanists to discuss the curious question of the rank of this plant as "alien" or "colonist." I have no authority for supposing that it is found upon the Atlantic coasts of France, but it inhabits damp and stony or rocky places in the south of that country. The peculiarly mild winter climate of Scilly is not unfavourable to it, and it may therefore be an old if not "the oldest inhabitant."—CHARLES C. BABINGTON.
