4. **Description of a New Tanager of the genus Euphonia.**

By Philip Lutley Sclater, M.A., F.L.S. etc.

(Aves, Pl. CXXIV.)

Mr. Gould having placed in my hands for examination some specimens of *Euphonia*, which he has lately received from Guatemala, I am enabled to exhibit to the Society examples of both sexes of what I believe to be a hitherto uncharacterized species of that genus. I am no friend to the too frequent practice of calling animals after individuals, but I feel that I shall meet with approbation in this instance if I confer on the present bird the name of one of the most eminent naturalists of the day, to whom moreover I am indebted for numerous acts of kindness from the period when I first had the pleasure of his acquaintance. I therefore propose to call this species

**Euphonia Gouldi.**

♂. Supra mari similis sed dilutior, fronte et pileo antico rubris: subitus flavescens, abdomen medio cum crisso dilute castaneis, lateribus flavido-olivaceis.

Long. tota 4'1, alae 2'2, caudae 1'0, tarsi 0'7.

**Hab.** In Guatemala et Mexico Meridionali.

Gould's *Euphonia* does not sufficiently resemble any other of the known members of the group to render it liable to be confounded with them. It may, I think, be most naturally placed at the head of the section containing *Euphonia pectoralis, E. rufiventris* and others (which has been denominated *Iliolopha* by Prince Bonaparte), and will serve to connect them with the yellow-headed species which precede them in my arrangement. I have suspected its existence for some time, but these examples are the first good ones I have seen of it. I have had for several years in my possession a bird which I now find to be an immature individual of this species; and M. Salle's collection comprised a single specimen not in very good condition, which he obtained in Southern Mexico. I gave a short description of the latter bird without naming it in my list of his collection (see P. Z. S. 1856, p. 303), but was mistaken (as I now see) in considering it a female.

This *Euphonia* is the fourth additional Tanager I have met with since completing the synopsis of these birds given in the Proceedings for last year; the others being *Calliste rufigena* (P. Z. S. 1856, p. 311), *Saltator melanopterus* (Pr. Ac. Sc. Phil. viii. p. 361), and *Pyranga roseigularis* (P. Z. S. 1857, p. 6). The latter bird was long ago described by Dr. Cabot, but at the time of completing my synopsis I had not seen specimens of it.
