Case 2996

**Pila** Röding, 1798 and **Pomacea** Perry, 1810 (Mollusca, Gastropoda): proposed placement on the Official List, and **AMPULLARIIDAE** Gray, 1824: proposed confirmation as the nomenclaturally valid synonym of **PILIDAE** Preston, 1915

Robert H. Cowie

*Bishop Museum, 1525 Bernice Street, P.O. Box 19000, Honolulu, Hawaii 96817-0916, U.S.A.*

Abstract. One purpose of this application is to place the names *Pila* Röding, 1798 and *Pomacea* Perry, 1810 on the Official List. The names refer, respectively, to Old and New World genera of freshwater operculate gastropods, known as apple snails, which are widely distributed over the tropics and subtropics, except the Australian region. The name *Ampullaria* Lamarck, 1799, a junior objective synonym of *Pila*, is sometimes used for both the Old and New World species, while *Ampullarius* de Montfort, 1810 has also been used for New World taxa. A second purpose of this application is to propose that **AMPULLARIIDAE** Gray, 1824 (type genus *Ampullaria*) be confirmed as the nomenclaturally valid name for the family, which includes ten genera and some 100 species. The objectively synonymous name **PILIDAE** Preston, 1915 is also in use by some authors. One or more species have recently become agricultural pests in south east Asia and in the Pacific Islands.

Keywords. Nomenclature; taxonomy; Gastropoda; *Pila*; *Pomacea*; *Ampullaria*; *Ampullarius*; **AMPULLARIIDAE**; **PILIDAE**; apple snails; agricultural pests.

1. The question of the validity of the generic name *Ampullaria* Lamarck, 1799 was first raised with the Commission in 1930 by H.A. Pilsbry and H.B. Baker. They applied to place 12 mollusk generic names on the Official List, an action which at that time implied conservation. Six of the names were placed on the List in Opinion 119 (January 1931) but the views of the mollusk specialists consulted were divided over the remaining names, including *Ampullaria*, and a decision on these was deferred. The Commission Secretariat has had correspondence on *Ampullaria* during the past 50 years but no further application has been published until now. There were no detailed rules for family-group names until publication of the 1961 edition of the Code.

2. Röding (1798, p. 145) proposed the generic name *Pila* for six species of freshwater snails, including the Asian species *Helix ampullacea* Linnaeus, 1758 (p. 771). The latter is the type species of *Pila* by subsequent designation by Dall (1904, p. 53). The name *Ampullaria* Lamarck, 1799 (p. 76) was introduced for the single species *H. ampullacea*, which is therefore the type of *Ampullaria* by monotypy. Dall’s (1904) designation of *H. ampullacea* as the type species of *Pila* rendered *Ampullaria* a junior objective synonym of *Pila* despite his (invalid) designation of the New World *Nerita urceus* Müller, 1774 (p. 174) as the type of *Ampullaria* (see Pain, 1972, p. 455; Berthold, 1991, p. 247). The six taxa originally included in *Pila* by Röding (1798)
were both Old and New World species, although the name as currently used is restricted to Old World taxa. *Pila* and most Old World taxa have a calcareous operculum; in all New World genera the operculum is horny.

3. The *Museum Boltenianum* (1798), in which the name *Pila* first appeared, was a catalogue compiled by J.F. Bolten of his large mollusk collection. It was prepared for publication as a sales catalogue after Bolten's death by P.F. Röding, who added the synonyms used in Gmelin's ([1791]) edition of Linnaeus's *Systema Naturae* and references to published figures. New generic names published in the work were largely ignored in the 19th and first part of the 20th centuries because very few copies of the work were known before the publication of a facsimile edition (of 75 copies) in 1906; the new genera were not described, their identity being determined only by the included nominal species which were themselves recognized only by bibliographic references to published figures; many authors considered that new names published in sale catalogues were not available; and adoption of the new names would have cast into synonymy many of the familiar names introduced by Lamarck the following year. Dall (1904) was the first author to adopt names published in the *Museum Boltenianum* but it was not until 1926 (Opinion 96) that the work was accepted by the Commission as being available. It was placed on the Official List in 1956 (Direction 48) with authorship attributed to P.F. Röding. No diagnosis was given for *Pila* but the included species were accompanied by references to the names, publications and illustrations of previous authors. *Pila* Röding, 1798 is therefore available under Articles 12b(5) and 12b(7) of the Code.

4. Authors in the 19th and first part of the 20th centuries (see, for example, Philippi, 1851; Reeve, 1856; Martens, 1873; Sowerby, 1909; Kobelt, 1911–1915; and Alderson, 1925) used the name *Ampullaria* Lamarck for species from both the Old and New Worlds. Considerable confusion has persisted since the publication of Opinion 96 because some authors have continued to overlook or disregard priority by using *Ampullaria* rather than *Pila* for the Old World species and, following Dall's (1904) invalid type designation, especially for New World species generally now placed in the genus *Pomacea* (para. 5 below) (see, for example, the recent publications of Martin, 1986; Lanzer & Schafer, 1987; Pointier, Theron & Imbert-Establet, 1988; Vaught, 1989; and Anderson, 1993).

5. In 1801 Lamarck (p. 93) published on *Ampullaria* again and included the New World nominal species *A. rugosa* Lamarck, 1801 (a junior synonym of *Nerita urceus* Müller, 1774; see de Montfort, 1810; Reeve, 1856; and Martens, 1873). Lamarck added to his (1799) diagnosis ‘munि d’un opercule corné’ (with a horny operculum). Dall (1904) designated (invalidly, see para. 2 above) *N. urceus* as the type of the genus. In 1810 de Montfort (pp. 242 (fig.) and 243 (text)) applied the name *Ampullarius* to *N. urceus* Müller, 1774 (= *A. rugosa* Lamarck); de Montfort cited Lamarck and emended the latter's name *Ampullaria* to *Ampullarius* ('Ampullaire; en latin, *Ampullarius*). The name *Ampullarius* de Montfort, 1810 was adopted as valid by many authors for New World species (see Pain, 1956, p. 79; de Oliveira, Rezende & de Castro, 1981, pp. 76–78). Perry (1810, pl. 11 and text, signature G5) introduced the name *Pomacea* for his single new species, *Pomacea maculata*, which was considered by Berthold (1991, p. 248) as a possible junior synonym of *N. urceus* Müller, 1774, although Pilsbry (1927, p. 63) and Pain (1956, p. 79; 1960, pp. 421, 423, 426) had previously retained *urceus* as distinct and synonymised *P. maculata* Perry,
1810 with *Ampullaria gigas* Spix, 1827. However, all three of these nominal species are South American and currently placed in *Pomacea*. The name *Pomacea* was attributed for many years to Perry (1811, text and pl. 3, fig. 3) and cited as a junior synonym of *Ampullaria*. The availability of *Pomacea* from 1810 was overlooked until Mathews & Iredale (1912) published a paper on Perry’s little-known work *Arcana*, which was issued in monthly parts (pls. [1-48] in 1810 and pls. [49-84] in 1811). Subsequently the validity of *Pomacea* Perry, 1810 (March) over *Ampullaria* de Montfort, 1810 (after March) was recognized (see Pain, 1956, p. 79; 1960, p. 421; Berthold, 1991, p. 248). The name *Pomacea* refers to New World taxa, some of which have lately been introduced into Asia.

6. I propose that the names *Pila* Röding, 1798 and *Pomacea* Perry, 1810 be placed on the Official List in accord with priority and majority usage as the names for, respectively, the Old and New World groups of species, and that *Ampullaria* Lamarck, 1799 and *Ampullaria* de Montfort, 1810 (an unjustified emendation of *Ampullaria*) be placed on the Official Index as junior objective synonyms of *Pila*.

7. Gray (1824, p. 276) introduced the family name *Ampullariidae* (as ‘Ampullariadæ’), based on *Ampullaria* Lamarck and including both Old and New World taxa. Preston (1915a, p. 96), acknowledging the synonymy of *Pila* Röding, 1798 and *Ampullaria* Lamarck, 1799 and the priority of the former, introduced the name *Pilidae* as a new name for *Ampullariidae*, perhaps, although not explicitly, considering *Ampullariidae* invalid because the generic name on which it was based was a junior synonym. Since the names of their type genera are objectively synonymous the same is true of the family names.

8. Article 40b of the Code states that, if a family-group name (in this case *Ampullariidae*) had been replaced before 1961 because the generic name on which it was based is recognized as a junior synonym, then the replacement name (in this case *Pilidae*) is to be maintained providing that it has ‘won general acceptance’. *Ampullariidae* is the earlier name; *Pilidae* has been widely used and remains in use by some authors (see, for example, Keawjam, 1986, 1990; Mochida, 1991; Neck & Schultz, 1992; Halwart, 1994), possibly in the mistaken belief that usage of a family-group name is dependent on its name-bearing genus being currently used as a valid name. Arguably, however, the name *Pilidae*, although widely used, has not ‘won general acceptance’. *Ampullariidae* also continues to be used (see, for example, Ponder & Warén, 1988; Cazzaniga, 1990; Berthold, 1991; Smith, 1992; Donnay & Beissinger, 1993; Eldredge, 1994; Cowie, 1995). Berthold (1991, p. 245) provided representative lists of publications using *Ampullariidae* and those using *Pilidae* but considered that few people preferred *Pilidae*. Even Preston himself (the author of *Pilidae*) continued to use *Ampullariidae* in compiling the Mollusca section of *Zoological Record* from 1915 to 1919 (for publications from 1913 to 1916, see Preston, 1915b, 1916, 1917 and 1919), and even though he included his own publication with the introduction of the name *Pilidae*. Conolly (1919, p. 37), following Preston as the compiler of the Mollusca section of *Zoological Record*, continued to use *AMPULLARIIDAE*. There is a huge literature dealing with the family. Lists of 48 representative publications using *Ampullariidae* and 21 publications using *Pilidae* are held by the Commission Secretariat; a single additional publication gave both names as equally valid. The name *Ampullariidae* currently appears to be the more widely used.
9. **Pilidae** Preston, 1915 has thus not won general acceptance and therefore it does not fulfil the requirements of Article 40b which would maintain it as the valid name. **Ampullariidae** Gray, 1824 should therefore be retained as the valid name. Members of the family are commonly known as apple snails and are frequently used as domestic aquarium snails. Some species have recently become extremely serious pests of rice and other crops in south-east Asia and of taro in Pacific Islands (Acosta & Pullin, 1991; Mochida, 1991; Smith, 1992; Anderson, 1993; Eldredge, 1994; Cowie, 1995). In retaining the earlier name **Ampullariidae** the interests of stability would be served in a group that is likely to attract increasing attention. However, since both **Pilidae** and **Ampullariidae** remain in current use and ‘general acceptance’ is open to interpretation, the case is referred to the Commission for a ruling.

10. The International Commission on Zoological Nomenclature is accordingly asked:

(1) to confirm that the family-group name **Ampullariidae** Gray, 1824 is the nomenclaturally valid synonym of **Pilidae** Preston, 1915;

(2) to place on the Official List of Generic Names in Zoology the following names:
   (a) **Pila** Röding, 1798 (gender: feminine) (senior objective synonym of **Ampullaria** Lamarck, 1799), type species by subsequent designation by Dall (1904) *Helix ampullacea* Linnaeus, 1758;
   (b) **Pomacea** Perry, 1810 (gender: feminine), type species by monotypy *Pomacea maculata* Perry, 1810;

(3) to place on the Official List of Specific Names in Zoology the following names:
   (a) *ampullacea* Linnaeus, 1758, as published in the binomen *Helix ampullacea* (specific name of the type species of **Pila** Röding, 1798);
   (b) *maculata* Perry, 1810, as published in the binomen *Pomacea maculata* (specific name of the type species of *Pomacea* Perry, 1810);

(4) to place on the Official List of Family–Group Names in Zoology the name **Ampullariidae** Gray, 1824, type genus **Ampullaria** Lamarck, 1799 (a junior objective synonym of **Pila** Röding, 1798);

(5) to place on the Official Index of Rejected and Invalid Generic Names in Zoology the following names:
   (a) **Ampullaria** Lamarck, 1799 (a junior objective synonym of **Pila** Röding, 1798);
   (b) **Ampullarius** de Montfort, 1810 (an unjustified emendation of **Ampullaria** Lamarck, 1799 and a junior objective synonym of **Pila** Röding, 1798);

(6) to place on the Official Index of Rejected and Invalid Family–Group Names in Zoology the name **Pilidae** Preston, 1915 (a junior objective synonym of **Ampullariidae** Gray, 1824 and invalid by the ruling given in (1) above).
