cult to say, but the name seems to have a status in nomenclature and hence renders Dr. Shufeldt's name invalid. We would propose as a substitute *Phasianus roberti* nom. nov. after Dr. Robert W. Shufeldt. — W. S.

**White on an Expedition to the Interior of Australia.** — This paper treats of the scientific results of a trip, on camel back, of 1300 miles undertaken by Capt. and Mrs. White primarily for the purpose of adding to the knowledge of the avifauna of interior Australia. Their route lay north from Oodnadatta, the railroad terminus 700 miles north of Adelaide, and extended to the headwaters of the Finke and Todd Rivers. "A dry and awful country which, when the rain comes, blossoms like the rose, but in a short space of time (about eight weeks) once more subsides into its normal state of drought." Capt. White adds "The dreary aspect and the solitude of this vast country followed us like a nightmare as we travelled south." Collections in various departments were made and are treated by specialists, the narrative and the account of the birds being by Capt. White. One hundred and eighteen species and subspecies are listed, six of which have been described as new by Mr. Gregory M. Mathews in the 'Austral Avian Record.' The stomach contents of sixteen species are described by Mr. Arthur M. Lea. — W. S.

**Cassinia, 1914**. The editor of the Delaware Valley Club's publication, Mr. Robert Thomas Moore, has brought out another exceedingly interesting number, though its appearance is somewhat delayed. While the policy of restricting the scope of 'Cassinia' to the states bordering on the Delaware is wisely continued, the character of the articles demonstrates the unlimited possibilities of intensive study in a limited area.

Dr. Spencer Trotter contributes to the series of biographical papers a discussion of 'Old Philadelphia Bird Collectors and Taxidermists' in which a disappearing type is considered from personal acquaintance with such examples as Chris. Wood, John Krider, etc. John D. Carter shows the possibilities of close observation on Delaware River birds even though only a short time each day may be available for the purpose. George Spencer Morris gives a delightful account of the Tacony Valley where his home is located and about which are centered all his early ornithological associations.

Henry Oldys has a paper on 'Individual Variety of Bird Songs' suggested by a paper by Mr. Moore in last year's issue of 'Cassinia' and Dr. Cornelius Weygandt writes of 'Summer in the Poconos' in his attractive style.
