Ardea tricolor ruficollis CORY, Auk, III, p. 502 (1886).

Common in the Bahama Islands and Greater Antilles (breeds).

In originally naming *A. cyanirostris* I considered it distinct from *A. ruficollis*, from the totally different coloration of the bill and legs supposed to occur only in the breeding season. Since that time specimens have been taken in the winter months representing this same state of plumage. *A. tricolor* undoubtedly assumes a yellow bill during most of the year, even if Audubon was wrong in his statement to the effect that it had a yellow bill in the breeding season. It is probable that the two birds are identical, but it is also possible that the Bahama bird may be distinct, and colonies occasionally wander to Florida, where it has been found breeding. This would account for the blue-billed specimens being taken in Florida, and would not prove its specific identity with *A. tricolor*.

SUMMER BIRDS OF SANTA CRUZ ISLAND, CALIFORNIA.

BY ELI WHITNEY BLAKE, JR.

THE island of Santa Cruz is the second in size of the Santa Barbara group; it is twenty-four miles in length by about six in breadth, and lies twenty-three miles off shore, directly opposite the town of Santa Barbara. In general character the island is mountainous with a comparatively level valley between two lofty ridges near its centre; the highest peaks are 2600 feet above the sea. Santa Cruz is of course very dry in summer, although there is water in some of the cañons throughout the year. It is owned by a stock company and is used as a sheep ranch; the herders constitute the only human inhabitants. My stay upon the island comprised two visits, extending from July 4 to July 24, and from August 6 to September 3. Our camp was in a cañon near Platts' Harbor, on the northern side of the island.

1. *Cephaloscyllium columba*. (PIGEON GUILLEMOT. — Common along the rocky shores up to July 24; none seen during my second visit. Probably breeds.
